ALASKA CONSULTANTS, INC. PLANNING AND RESEARCH

March 31, 1975

The Honorable Larry E. Powell
Mayor of the City of Yakutat
Post Office Box 6
Yakutat, Alaska 99689

Dear Mr. Powell:

We are pleased to transmit herewith a Socio-Economic Survey of the Yakutat Area prepared for the City of Yakutat. Included in this report are the complete computer print-out of the survey of March, 1975; a section on how to interpret the data; a question by question analysis of the data; and a general interpretation of the survey results for planning purposes.

This socio-economic survey is the first step in the process of updating the City of Yakutat's Comprehensive Development Plan. As such, it was undertaken to identify or more precisely define the aspirations, needs and desires of this community. Since Yakutat is predominently a Tlingit Indian community, it was considered necessary to elicit those aspects of the Yakutat culture that were desired to be maintained or enhanced by the community.

Upon the completion of a thorough examination of the socio-economic survey, the City has expressed the desire to establish a minimum acceptable level at which the residents of Yakutat believe their culture can and must be maintained or enhanced, to generate a series of goals reflecting community aspirations, and to develop a strategy and a work program for their implementation.

It is hoped that effort in the ongoing community planning process of Yakutat will contribute to Yakutat's progress in alleviating its human, social and economic problems and contribute toward providing a desirable level of living for all of its residents.

625 WEST FIFTH AVENUE, SUITE I, ANCHORAGE, ALASKA 99501 TELEPHONE (907) 278-4111/274-3412

We wish to extend our sincere appreciation to the officials of the City of Yakutat, the Yak-Tat-Kwaan, the Alaska Federation of Natives and especially to the friendly and patient individuals surveyed whose cooperation and assistance in providing their views and advice formed the basis of this report.

Respectfully submitted,

Thomas J. Smythe

I. INTRODUCTION

Yakutat is a small predominantly Tlingit Indian community located on an isolated coastal lowland which is separated from Southcentral Alaska by the Malaspina Glacier; from the rest of Southeast Alaska by the Glacier Bay National Monument; and from Canada by the rugged St. Elias Range. The town itself faces onto Monti Bay, an arm of the much larger Yakutat Bay, the only natural deep-water harbor on the Gulf of Alaska between Cordova and Cape Spencer.

The stormy seas of the North Pacific Ocean make it impossible for Yakutat to be served by the present State marine highway system. Furthermore, the community has no conventional road connection to the rest of Alaska. As a result, all passenger traffic in and out of Yakutat is by air.

Except for the Eyaks of the Copper River delta area, the Yakutat Tlingits are the northernmost extension of the Northwest Coast Indian culture. However, the origin of the Yakutat people has been complicated by ancestry in Eyak tradition, an early residence of the Chugach Eskimo and the later arrival of the Bremner River people. Therefore, what might have appeared to be a typical Tlingit village to the first Europeans visiting here in the late 18th century was already a complex and distinct culture. This was further complicated through contact with the white man.

Hunting, fishing and trading formed the traditional mainstay of people in the Yakutat area. Today, like many other Southeast Alaskan communities, fishing and fish processing are the major source of economic strength. Salmon is the principal species caught and processed here; although halibut and Dungeness, tanner and king crab have been added in recent years. There is some potential for expansion in this industry, particularly in the tanner crab fishery, as the waters between Yakutat Bay and Cape Spencer have not yet been fully exploited.

Exceptional fresh and salt water fishing and hunting opportunities, coupled with outstanding scenic attractions, form the basis of Yakutat's tourism and recreation industry. Although relatively undeveloped, this industry contributes to the local economy through the use of guide services and air charter and lodge facilities, as well as through purchases of incidental goods and services in the community.

The wood products industry is presently at a low level in Yakutat, although it offers promise of being a major source of income and employment in the future. Most of the forest lands in the Yakutat area are within the Tongass National Forest, including some of the most valuable stands in Southeast Alaska. The Yakutat village corporation, Yak-Tat-Kwaan, is a lesser but significant owner of forest lands in the area since its selection of 23,040 acres to which it was entitled under the Alaska Native Claims Settlement Act. Using a rotation of 120 years, the local forests are capable of supporting an annual cut of about 69 million board feet of timber on a sustained yield basis. However, the fuller utilization of the forest resources of the area has been delayed pending the resolution of litigation over the Forest Service's long-term timber sale in the North Tongass to U.S. Champion-International.

The most recent development of economic significance to the Yakutat area involves possible onshore oil and gas activities as a result of the expressed intention of the U.S. Department of the Interior to lease outer continental shelf lands in the Gulf of Alaska. The scale of the Gulf of Alaska petroleum province is highly speculative. Some idea, however, can be gauged from the Alaska Department of Natural Resources' estimates of recoverable oil resources in the area of 7.2 billion barrels and recoverable gas resources of around 52.6 trillion cubic feet.

Industry nominations indicate that approximately two-thirds of the initial tracts of interest lie in the offshore area from Icy Bay to Cape St. Elias. Exploration in these areas would logically be serviced from Yakutat. A lease sale has been scheduled for the latter part of this year and oil-related activity has already been generated in the community as a result of offshore seismic work and local land acquisitions by oil company interests.

At the time of the 1970 Census, there were about 100 jobs and 250 people in the Yakutat area, with about 190 of the people living in the City of Yakutat. Today, the City estimates that there are approximately 450 people living in the area, with around 300 living within town.

The effects of large-scale oil and gas industry development or, for that matter, large-scale wood products industry development, on employment in the Yakutat area could be substantial. For example, the Outer Continental Shelf Draft Environmental Impact Statement indicated that offshore

exploration and development activities in the Gulf of Alaska could result in the addition of as many as 1,210 onshore jobs in the Yakutat area by 1985, for a total area population of around 4,600 persons by that date. Growth of such a magnitude would change the structure of Yakutat as a community. Among other things, it would affect the town's cultural base and local subsistence activities, as well as placing enormous demands on land use and community facilities and utilities.

As a means of attempting to minimize the adverse impacts of large-scale economic development and population growth and, at the same time, capitalizing on the more beneficial aspects of growth, the City of Yakutat has embarked on a program to update its comprehensive development plan. This socio-economic survey was undertaken as the first step of that planning program to more precisely define community aspirations, needs and desires. It is essential that this work be done before growth takes place so that the community can identify and seek to retain those elements of the local culture which are important to people now living in the area. Once a major influx of new residents takes place, the job facing the City would be much more difficult.

The City of Yakutat, in part through the use of this survey, will seek a basic definition of what may be called the cultural imperative or the minimum acceptable level at which the residents of Yakutat believe their culture can and must be maintained. Once those elements that are of importance have been defined, a strategy will be developed to maintain or enhance them and a work program will be designed to carry them out.

It was estimated by the City of Yakutat that there were around 300 City residents and close to 150 persons living outside town. An interpolation of 1970 Census data indicated that this population would include approximately 125 households and about 225 adults. On this basis, it was decided to sample every third housing unit in the Yakutat area on a geographic basis, or a total of 50 surveys. In addition, it was determined to be desirable to reflect the City's estimate of approximately one-third of the households being outside town, and two-thirds being within the City of Yakutat. Furthermore, the City estimated that Indians were heads of households in 70 percent of the households in town, in contrast to only 15 percent outside. The only other control was the proportion of males and females, where it was estimated that the males in the area slightly outnumbered females.

The principal surveyors were selected by Rowan Group, Inc., which was responsible for the field survey, with the only stipulation being that, where possible, Tlingit Indians should be interviewed by Tlingit surveyors and whites by white surveyors. This was done to facilitate communication should language difficulties be encountered among elderly Tlingit people and because questions on interracial attitudes were being asked. The principal surveyors then selected local interviewers, conducted a training program and field tested the survey. As a result of the field testing, some changes were made in the survey instrument prior to the commencement of the survey of the Yakutat area.

The survey itself was conducted over a three-day period in March, 1975 and the surveys were screened in the field to ensure reasonable compliance with the specified controls on geography, sex and race of household members interviewed.

Upon the satisfactory completion of 50 questionnaires, the results of all questions were hand-tabulated, with the answers being analyzed and grouped (coded) into various categories when this was necessitated by open-ended questions (questions not having a predetermined array of possible responses). Fifteen questions in the survey were then selected for cross-tabulation and a computer program was written according to the survey design to satisfy the demands of the data input and the informational requirements desired. This program was developed and the program run by Alaska Data Systems, Inc.

The resulting 172 question computer print-out not only lists the number of responses to individual questions, but also how each question was answered according to the selected cross-tabulation variables, including sex, race, age, educational attainment and others. By comparing the cross-tabulations with the overall answers to any given question, it is therefore possible to determine if a particular group of people is responding in a particular way.

For an overview of the questions and responses to them, seven major areas were selected for analysis because of their implications for planning in Yakutat. These areas are:

1. Migration and sense of community
2. Culture
3. Growth

4. Work
5. Housing
6. Community facilities and services
7. Social interaction

In addition, a detailed analysis of each question asked has been included, as well as the complete computer print-out of answers to the survey and a section on how to interpret the computer print-out data.

II. GENERAL PLANNING IMPLICATIONS FOR THE YAKUTAT AREA

1. MIGRATION AND SENSE OF COMMUNITY

More than one-third (36 percent) of the 50 persons surveyed had always lived in the Yakutat area. As might have been expected, all but one of these lifelong residents were Indian and most (80 percent) lived within the City of Yakutat. In addition, six (or 12 percent) of those who had moved to Yakutat from another town listed "home town" as their best reason for remaining in this area. All six were City residents and five were Indian. As a result, it is reasonably safe to assume that Yakutat was the home town of about half of the people surveyed and that this group was more than 90 percent Indian and more than 90 percent City residents.

Thirty-two persons (64 percent of those interviewed) had migrated to the Yakutat area from another community and over 70 percent of this group was white. The migrants to Yakutat had achieved a relatively high level of formal education and were generally engaged in the more skilled occupations such as those in the professional/technical/managerial area. This, in turn, was reflected in generally higher household incomes.

More than two-thirds (68 percent) of the migrants to Yakutat came from other Alaska communities. Furthermore, half of the Alaskan migration was from Southeast Alaska and almost 40 percent was Indian. On the other hand, 9 out of 10 migrants from outside Alaska were white.

Employment opportunity was the principal reason cited by people for leaving their previous communities of residence. In fact, over 70 percent gave this reason. However, all but one of this group was white, whereas Indians who had not always lived in Yakutat listed a wide variety of reasons for moving from their previous communities.

When asked their main reason for deciding to move to Yakutat, employment was cited by 43 percent of the migrant group. For the most part, the remaining reasons had to do with opportunities for small community living offered by Yakutat (30 percent) and a desire of some people to return to their home town. Employment and small community living were listed most often by whites, whereas "home town" was an Indian response.

Almost three-quarters (74 percent) of the people surveyed indicated that they intended to remain in the Yakutat area indefinitely or permanently. Disregarding the 14 percent who did not know how long they intended to stay here, 86 percent of the remaining respondents considered themselves permanent residents of the Yakutat area. This proportion was even higher for people living within the City limits.

Small community living was cited by 42 percent of those interviewed as the best reason for remaining in Yakutat, although this was primarily a white response. Home town (38 percent) was a close second, with this being predominantly a response of Indian and City residents. Employment, which was the major reason for people leaving previous communities of residence and the main reason for people moving to Yakutat, was pointed to by only 19 percent of the respondents as the best reason for remaining in the community. However, when asked the best reason for leaving Yakutat, 36 percent of those interviewed cited employment, with about 13 percent claiming that community growth and development would be the main factor influencing them to leave.

Some insight into the meaning of small community living and the desire to live in one's home town can be gauged from responses to the question asking people to list the two or three really good things about Yakutat. Of the initial responses to this question, 38 percent of the respondents believed that the feeling of living in a small town with its social and economic interactions was the best thing about the community. This was followed by good hunting and fishing opportunities (25 percent) and the natural setting (22 percent). Good hunting and fishing was chiefly a male response, a small town feeling was most often cited by whites and the natural setting was more important to Indians.

When asked where they thought most people from Yakutat would move if they left town, almost half (46 percent) believed somewhat paradoxically, that they would move to Anchorage, with only 18 percent listing Southeast Alaska communities as the new destination. The group which believed people would move to Anchorage was almost two-thirds Indian and two-thirds female, was predominantly made up of renters and in favor of community growth although it overwhelmingly opposed large-scale development.

Discounting those who ventured no opinion on growth or the eventual preferred size of the community, about 54 percent of the people surveyed favored community growth, while approximately 46 percent were opposed. However, those who desired community growth did not apparently want it on a very large scale as a majority of this group wanted Yakutat's population to remain under 1,500.

2. CULTURE

Culture basically consists of the ideas, customs, skills, arts and other elements in the society of a given people at a particular period of time. Historically, the dominant culture in the Yakutat area has been Tlingit. This has been influenced in recent times by western culture and the two cultures have interacted to produce one which is a part of everyone in the Yakutat area.

When people were asked to name the three or four things that were most important in the Yakutat culture, 34 percent of the first responses listed Tlingit arts and crafts, followed by the Tlingit language (26 percent), subsistence pursuits (10 percent), traditional Tlingit dancing (8 percent) and general lifestyle and customs (8 percent).

An analysis of the first-listed responses showed that Tlingit arts and crafts were of prime importance to both males and females and to Indians and non-Indians alike. By contrast, retention of the Tlingit language was more important to females and Indians, both by a two to one margin, while general lifestyle and customs was an exclusively white response. In addition, those who listed subsistence activities and language first as important elements of the Yakutat culture tended to be against growth, particularly in the case of large-scale development which could have the effect of disrupting these elements of the local culture.

There was a good deal of concern over the possible loss of the Yakutat culture as it exists today. When asked if they feared the loss of this culture, 68 percent of those interviewed indicated that they did, with Indians and non-Indians and males and females equally concerned. Although this group was optimistic about the future, it was highly unfavorable to large-scale wood products and oil and gas industry development.

The thought that Tlingits could become an ethnic minority in Yakutat was not relished by half of the persons who answered this question. Only one person thought that such a situation would be a good thing, while the remainder thought it would make no difference. There were no sex or racial biases in responses to this question.

When the 21 persons who believed that Tlingits becoming a racial minority in Yakutat would be a bad thing were questioned further as to their reasons for this belief, two major responses emerged. First (9 responses) was the potential loss of cultural identity and second (7 responses) was the loss of voice of Tlingits in community affairs. Loss of cultural identity tended to be more a white response and one from outside the city, while loss of voice was more often cited by Indians and was exclusively a response of persons living in the City of Yakutat.

Overall, people who believed it would be a bad thing if Tlingits became a racial minority in Yakutat tended to have higher incomes and a relatively high level of educational achievement. This group favored community growth and was more than usually in favor of annexation by the City, but was opposed to large-scale development.

Nevertheless, there appears to be some dichotomy of thought on the subject of the preservation and enhancement of the culture of the Yakutat area. On the one hand, the people surveyed displayed the versatility, independence and work ethic demanded in the money income dominated society of the Western world. On the other hand, traditional values and customs remained important. Yet, despite this desire to succeed in terms of the dominant society while at the same time holding on to the traditional views of the past, a majority of those who ventured an opinion on the subject thought that life would get better during the next five years.

Views expressed which tended to be more in conformance with the prevailing national work ethic included the belief that education is the key to success (rated as very true by 72 percent of those interviewed); that it is at least somewhat important to find a special line of work in order to succeed (72 percent); that there is never enough time to get all the things done that have to be done (considered to have some truth by 82 percent of the respondents); and the belief that people have the ability to make their lives exactly the way they wish (with only one person completely disagreeing with this statement).

Additional views which were indicative of the prevailing national work ethic included the almost universal belief (96 percent) that people were getting increasingly interested in money, although a smaller group (62 percent) thought the statement that people lose their ability to get along with others as they become more competitive had at least some truth. Finally, mobility or the ability and willingness to move to a labor market of greater opportunity is inferred by the fact that 56 percent of those interviewed agreed at least in part that the young people in the community would have more opportunity for a better life if they left Yakutat.

On the other hand, traditional ways of life remained important to the people interviewed. Sixty-eight percent of the respondents believed that Indian traditions had a place in today's life and an even larger group (74 percent) believed very strongly that the teaching of the Tlingit language in the Yakutat schools was essential to maintain and enhance the local culture.

However, when opinions were expressed on whether or not pride in the old ways was disappearing, on the importance today of the division of the Tlingit nation into Eagles and Ravens and whether or not family ties were as strong as in the past, a sense of cultural loss was expressed in that these traditions were no longer considered to be as important today as they had once been. Nevertheless, these traditions remained of greater importance to Indian respondents and to those from within the City of Yakutat.

3. GROWTH

Exactly half of the people interviewed in the Yakutat area favored the growth of this community, whereas 40 percent preferred the population to remain about the same, 2 percent wanted the population to decline and 8 percent had no opinion one way or the other. Discounting those who had no opinion on this subject, 54 percent of those surveyed could be said to favor community growth, with 46 percent opposed. The latter group would have preferred that Yakutat's population remain under 600. However, even those who professed to want Yakutat to grow had a limited concept of growth as a majority of these people foresaw an "ideal" population for the community of less than 1,500.

Those who expressed a desire for growth in the Yakutat area were primarily homeowners who were optimistic about the future. Although these people believed there would be a worsening of race relations in the future, this was also the only group containing individuals who thought that race relations would improve. In addition, this group was in favor of large-scale wood products and oil and gas industry development and contained a high proportion of persons from outside the City of Yakutat.

On the other hand, the group which preferred that Yakutat's population remain about the same or decline contained a high proportion of renters. These people were almost equally divided in their opinions of whether life would improve in the future or get worse. They also strongly opposed large-scale wood products and oil and gas industry development and a relatively high proportion lived in the City of Yakutat.

One factor in the attitudes of both Indians and whites against large-scale growth in the Yakutat area was a fear of the loss of the existing community culture and, to a lesser extent, the thought of Tlingits becoming a small ethnic minority. These fears were particularly strong among those in the higher income ranges and with higher levels of educational achievement. Sixty-eight percent of the people interviewed said they feared the loss of the Yakutat culture, while 42 percent thought it would be a bad thing if Tlingits became an ethnic minority locally. Only one person surveyed thought the latter would be desirable, with the remainder believing it would make no difference. Some difference in race attitudes were apparent, however, as whites who thought that Tlingits becoming a small ethnic minority locally would be bad gave as their main reason a fear that Yakutat people would lose their identity as a distinct culture, whereas Indians more often listed their fear of a loss of voice in the affairs of the community.

Large-scale growth was also seen to be a problem in terms of race relationships. Of those who answered this question directly, 90 percent believed that race relations in Yakutat would deteriorate under conditions of rapid population growth.

Aside from expressed fears of a loss of identity and voice and of worsening race relations, it must be assumed that substantial growth would normally result in some economic costs as well as benefits. One of these would undoubtedly be increased competition for subsistence

resources. Since 60 percent of the people surveyed in the Yakutat area estimated that between 25 and 50 percent of the dollar value of their households' food came from subsistence activities, large-scale growth could result in a substantial cost to many households.

Another growth-related problem as seen by a number of Yakutat residents was environmental disruption. This danger was cited by half of those opposed to the possible location of a gas liquefaction plant in the vicinity of Yakutat. Among other things, environmental disruption must be viewed as a disruption of subsistence activities and of existing commercial resources, especially the fisheries resource.

On the other hand, those who favored large-scale onshore oil and gas facilities in the Yakutat area believed the community would benefit through increases in employment and income and improved community facilities.

A series of questions was asked relating to the degree of importance which people attached to a range of possible additions or improvements to the community. These included a practicing doctor, a practicing dentist, a hospital, a swimming pool, a large general merchandise store, a community college, a beauty/barber shop, a hardware and building supply business, a drug store, a bank, a radio station, a television station and a local newspaper. Most of these amenities are normally found in Alaska communities with populations of 1,500 or more. Thus, despite the importance of these facilities to people in Yakutat, most would require substantial community growth before they could be realized (although a bank is scheduled to open in Yakutat within the next 6 months).

With the above in mind, it is interesting that in all cases a majority of respondents considered each listed improvement or addition to the community to be of at least some importance. However, in most instances, those who favored these additions or improvements also tended to favor growth in the Yakutat area and to have mixed opinions on large-scale development. By contrast, those who viewed these additions or improvements as being of little importance generally opposed community growth and large-scale development. In terms of race, the listed improvements and additions to the community were very important to Indians more than to whites.

Another series of questions was asked relating to the compatibility of various industry mixes, with the industries selected being those existing or likely to exist in the Yakutat area, i.e. fishing, forest products, oil and gas, tourism and recreation and subsistence activities.

Generally, it can be said that industry mixes already in existence in the Yakutat area were viewed as being the most compatible. These industries were obviously preferred by those who wanted to maintain the status quo, whereas opposition to other industries, particularly the oil and gas industry, apparently derived from perceived adverse affects of growth and from the vested interests of those interviewed in existing industries.

The mix rated highest in terms of compatibility was the fishing industry and subsistence activities which was considered compatible by 86 percent of those surveyed. Both of these are existing activities of primary importance in the Yakutat area. Next in terms of compatibility was the tourism and recreation industry with subsistence activities which received a 72 percent favorable rating, while 68 percent believed the fisheries industry to be compatible with tourism and recreation.

The forest products industry was rated at an intermediate level of compatibility by Yakutat area respondents. The degree of compatibility ranged from a surprisingly high 64 percent rating with the fisheries industry to a not so surprising low of 56 percent with subsistence activities.

The lowest range of compatibility involved the oil and gas industry which was viewed as being basically incompatible with subsistence activities and the fisheries industry. However, probably as significant as negative views on the compatibility of this industry with others was the high proportion of people who apparently felt they knew too little about it to judge its relative compatibility. For example, although 38 percent of those interviewed believed the fisheries and oil and gas industries to be incompatible and 32 percent viewed them as being compatible, fully 30 percent indicated they did not know whether they were compatible or not.

In general, the groups which believed the various industry mixes were compatible included more males than females, more whites than Indians, proportionately more people from outside the City than within, people with optimistic views about the future and those who wanted

Yakutat to grow. On the other hand, the groups which viewed these industry mixes as being basically incompatible included more females than males, more Indians than whites, were predominantly City residents and a relatively high proportion were renters. These people were more pessimistic about the future and wanted Yakutat's population to remain about the same.

With regard to the oil and gas industry, it is significant that the people surveyed expressed increasingly definite opinions about this industry as questions moved from the general to the specific. Furthermore, as questions on the merits of oil and gas development became more specific, those favoring such development increased at a greater rate than those opposed to it although the latter outnumbered the former in all cases. Thus, when people were asked their opinions of the oil and gas industry in general, the responses were 12 percent favorable, 24 percent unfavorable, 54 percent mixed and 10 percent with no opinion. When asked to express an opinion of a reasonably large oil and gas industry operation in the Yakutat area, responses were 24 percent favorable, 36 percent unfavorable, 36 percent mixed and 4 percent with no opinion. However, when asked to comment on the merits of a large-scale facility such as a gas liquefaction plant in the Yakutat area, 32 percent of the responses were favorable, 40 percent were unfavorable and a lesser proportion (28 percent) had either no opinion or a mixed opinion on the subject.

Also significant were the attitudes toward growth and large-scale oil and gas development of those people who stated that they had had contact with the industry beyond that with local petroleum dealers. This group favored community growth by almost a 2 to 1 margin but opposed a reasonably large-scale oil and gas operation in the Yakutat area by about the same margin. On the other hand, those without contact with the oil and gas industry were fairly evenly divided on whether or not they wanted Yakutat to grow, as they were also on large-scale oil and gas development in the Yakutat area. In addition, people who had migrated to Yakutat from other Alaskan areas (excluding Southeast Alaska), many of which are being affected by oil and gas related activities, tended to strongly oppose this industry.

As with the oil and gas industry, the people surveyed expressed increasingly definite opinions on the forest products industry as questions moved from the general to

the specific. However, in the case of the forest products industry, the shift was to a more unfavorable view. Thus, when asked their impressions of the logging industry in general, 26 percent responded favorably, 36 percent responded unfavorably, 26 percent had mixed opinions and 12 percent had no opinion. However, when asked for an opinion on a reasonably large-scale forest products operation in the Yakutat area, the favorable responses remained at 26 percent but unfavorable responses climbed to 46 percent. This shift to an unfavorable position was shared almost equally by Indians and whites and by those living inside and outside the City.

Unlike people in many communities of rural Alaska, the people of Yakutat appear to have some capacity locally to participate in the economic growth of this area. The median household income of those surveyed was in excess of $15,000 per year; 70 percent had savings accounts; 28 percent held either stocks or bonds; 52 percent owned commercial property or assets and half had life insurance policies. Furthermore, if they had sufficient monies to invest, two-thirds of those answering the question claimed they would invest locally.

4. WORK

Southeast Alaska is one of the most stable regions of the State. However, communities like Yakutat which have economies heavily based in fishing and fish processing often experience extreme seasonality of employment and, therefore, high unemployment rates for much of the year. Not surprisingly therefore, unemployment was felt to be a major community problem in Yakutat as it was listed as an important problem less often only than community facilities when all responses to this three-part question were tabulated. Nevertheless, at the time of the Yakutat survey, only one household interviewed had no one employed and 54 percent had more than one person employed.

Household income levels in Yakutat were fairly high. Only 30 percent of the households surveyed reported incomes of less that $10,000 in 1974 and more than half of this group had incomes of between $7,000 and $9,999. On the other hand, over half of the households interviewed (54 percent) had incomes of $15,000 or more in 1974 (broken down as 24 percent between $15,000 and $19,999;

20 percent between $20,000 and $24,999; 4 percent between $25,000 and $29,999; and 6 percent with $30,000 or more). Furthermore, these incomes were supplemented in 60 percent of the cases by Alaska Native Claims Settlement funds and in 90 percent of the cases by subsistence activities such as hunting, fishing and berry picking. As a result, the cash incomes cited by persons interviewed tend to understate the economic wellbeing of the people of this area.

People surveyed in the Yakutat area were engaged in a reasonably wide range of occupations although the nature of the economy of this area was expressed in that the largest number (24 percent) were engaged in the professional/technical/managerial area and 28 percent were involved in the fisheries-related occupations of farming/fishery/forestry (18 percent) and processing (10 percent). The other support occupations such as machine trades, structural work and miscellaneous occupations represented a combined total of 10 percent of the people interviewed. The clerical and sales and the service occupations, which together make up the retail and service sector, accounted for 28 percent of the respondents, while the 10 percent whose occupations are listed as not specified were mostly housewives.

There was a reasonably good distribution of respondent job skills in the Yakutat area. A single exception to this classification of job skills was in bench work for which there is little demand in the Yakutat area.

The people interviewed also exhibited a fairly wide range of job skills except in the area of bench work for which there is little demand locally. The greatest number of primary skills cited was in the clerical and sales area where 24 percent claimed a degree of proficiency. However, this group was almost exclusively female. The other major skill areas were in services (18 percent) and in professional/technical/managerial and structural work, both of which were claimed by 18 percent of the respondents.

By rural Alaska standards, the people surveyed in the Yakutat area were well educated as 86 percent had advanced beyond the 9th grade and 32 percent had completed at least one year of college. In addition, a significant percentage (28 percent) had taken a training course designed to lead to employment within the last five years and no one thought that training courses were not

worthwhile. In fact, 76 percent of the respondents indicated they would take a training course outside Yakutat if a good job awaited them upon their return. The majority of these people were women and Indians substantially outnumbered whites. A similar response was given to on-the-job training, with all persons interviewed believing it to be worthwhile and 90 percent claiming they would be interested in this type of training if it were available.

When people were asked how they thought that Yakutat residents could best fit into possible oil and gas industry development in this area, 60 percent of those who responded directly to the question believed it would be through employment. In addition, 40 percent of the people surveyed indicated that they would attempt to get work with the oil and gas industry if development took place in the Yakutat area. Most in this group felt they were generally qualified or had specific qualifications which would enable them to be successful in obtaining employment with the industry.

5. HOUSING

Slightly more than half of those interviewed in the Yakutat area (52 percent) were satisfied with their present housing, while 44 percent were dissatisfied and 4 percent ventured no opinion on the subject. The group which was not satisfied contained more male than female respondents and twice as many Indians as whites. Almost half of these people listed inadequate space as the principal thing they disliked about their present housing, followed by somewhat less than 25 percent who listed generally poor condition and inadequate utilities. Another expression of dissatisfaction with existing housing conditions was indicated when people were asked to name the two or three most important problems in the community, as 12 percent of the initial responses cited housing.

The surveyors were asked to judge housing conditions on a purely visual basis in terms of their being good, fair, poor or very poor. To the surveyors, it appeared that 88 percent of the people interviewed lived in acceptable housing (i.e. in good or fair condition) while 12 percent lived in housing which was clearly unacceptable (i.e. poor or very poor), a figure corresponding to the proportion of initial responses

citing housing as a major community problem. Residents of housing in unacceptable condition tended to have lower incomes and included twice as many Indians as whites. In addition, of the 6 respondents whose houses were rated as unacceptable, 5 were within the City of Yakutat.

Another indication of the existence of unacceptable or substandard housing is evidenced by housing size and by the number of persons per room. A majority of the housing units surveyed in Yakutat (68 percent) contained 5 rooms or more, with an additional 12 percent containing 4 rooms. The remaining 10 housing units (20 percent) were 2 and 3 room units which were predominantly occupied by renters and were located within the City of Yakutat.

Housing units with one or fewer persons per room accounted for 76 percent of all surveyed units in the Yakutat area. This is comparable to the 80 percent figure cited for the Skagway/Yakutat Census Division by the 1970 Census. However, of the 12 housing units surveyed which reported more than one person per room, 11 were within the City of Yakutat and 10 were occupied by Indians.

A relatively high proportion of people interviewed were renters. Homeowners (including people who were buying their homes) accounted for 54 percent of the respondents, while 42 percent were renters and 4 percent lived in rent-free accommodations. The preponderance of renters was less marked within the City where 64 percent of those surveyed were homeowners or home buyers (virtually the same as the 63 percent recorded for the City by the 1970 Census). Outside town, on the other hand, almost 60 percent of the respondents were renters.

People in Yakutat were also asked how long they had lived in their present housing. In this regard, it was interesting to find that 78 percent of those interviewed had lived in their present homes for five years or less and 64 percent had lived in their present homes for less than two years. Of the latter group, a large majority was Indian and lived within the City of Yakutat.

Questions relating to housing location which were asked included the extent to which people lived next to relatives and the actual and preferred distances between housing units. It was found 44 percent of the people surveyed were related to at least one person in one of the four closest units, with almost a quarter of this group being related to people in all four adjacent housing units. As might have been expected, a greater proportion (53 percent) were

related to people in at least one of the four nearest housing units in the City of Yakutat than was the case outside town (28 percent). In addition, almost three-quarters of the people surveyed who lived next to relatives were Indian.

Although almost three-quarters of the people interviewed lived within 100 feet of their nearest neighbor, more than half (56 percent) said they would prefer to be located further away, principally to obtain more privacy or increased yard space. In fact, given the option of living closer together with increased interior space or living further away with less interior space, almost 70 percent indicated they would rather sacrifice the interior space and live further away.

In summary, it can be said that in terms of housing conditions and overcrowding, the problem that does exist affects less than a quarter of the households and these are mostly located in the older developed areas within the City of Yakutat. Furthermore, they are occupied by a renter group which is predominantly Indian.

6. COMMUNITY FACILITIES AND SERVICES

When asked to name the two or three most serious problems in the Yakutat area, inadequate community facilities were named in about one-quarter of all the responses. It was also at the top of the list of initial responses, with 14 percent of the people interviewed citing this as the first problem. However, the lack of social activities in Yakutat and inadequate transportation services which accounted for 12 percent and 7 percent of all responses respectively are also, at least in part, a function of community facilities and services. Thus, more than 40 percent of the problems which respondents considered serious involved this important sector.

This locally perceived problem with the level of community facilities provided in the Yakutat area was further substantiated in the answers given by 25 percent of those to whom the question applied for favoring a specific large-scale oil and gas development in the vicinity of Yakutat. These people supported such a large-scale development primarily because of the improvements or additions to community facilities and services they believed would result. Furthermore, aside from employment opportunities, improved community facilities was the only major area of benefit foreseen by Yakutat respondents from this type of development.

Other indications of a basic demand for improved or expanded community facilities and services were found in the series of questions relating to the acceptance or rejection of a number of ideas and customs. For example it was found that more than 70 percent of the respondents believed education was the key to success. However, over half of those interviewed thought that family life in Yakutat had deteriorated because family members left the community for long periods of time for education as well as employment and only some came back.

The obvious implication is local educational facilities and services would help abate this out-migration. Also, perhaps a more remote analogy can be drawn in that more than half of the people interviewed believed the world outside Yakutat to be far more attractive, interesting and exciting than the community of Yakutat. Community facilities are a means of making a community more attractive and interesting.

When it came to questions on the relative importance of specific facilities and services not presently available in the Yakutat area, an overwhelming majority deemed each to be an important improvement or addition to the community. For example, a hospital was seen as important to 90 percent of those interviewed, a swimming pool to 78 percent and a community college to 62 percent. However, these particular facilities and services are generally not considered feasible for a community at Yakutat's current scale of development.

Although Yakutat is one of the most interesting and usable recreation areas in North America and is apparently well used by most people surveyed, there is nevertheless a distinct pattern of non-participation in recreation and leisure time activities by households of Indian respondents and those within the City of Yakutat. By contrast, a significantly higher participation in these activities was exhibited in most cases by non-Indian households and those from outside the City. However, it was interesting to note that when the recreation or leisure time activity was one which required a formal setting, such as a court to play basketball or a floor for dancing, Indian participation exceeded non-Indian participation and that of City residents exceeded those from outside town.

In the cases where participation was extremely high, such as fishing with persons from 96 percent of the households interviewed participating, listening to records

or tapes (94 percent), boating (92 percent), walking (90 percent), picnicking (88 percent), visiting friends or relations (86 percent), and sewing (86 percent), formal facilities are not a major factor. A possible exception is boating activities and Yakutat does have a small boat harbor with floats. Otherwise, these activities take place informally on the waters, road-connected land areas and homes of the area, with the incidence of non-participation being higher in City and native households.

7. SOCIAL INTERACTION

When the people surveyed were asked to list the two or three most important problems in the Yakutat area, more than a quarter of the responses could be classified in the area of social interaction. The lack of social activities (12 percent), excessive drinking (11 percent) and interracial difficulties (5 percent) were the principal social problems identified.

While the total number of responses to this three-part question tend to provide more insight into all of the problems affecting those interviewed, the initial response tends to single out the most acute problem of each respondent. In this case, drinking was the single most important problem (14 percent), followed by a lack of social activities (12 percent) and interracial difficulties (8 percent) or, these areas of excessive or little social interaction were indicated to be a problem to over one-third of those interviewed.

Excessive drinking is a serious problem throughout Alaska; however, because so much guilt is usually associated with it in rural Alaska, it is often difficult to gauge the accuracy of responses to questions in this area. Nevertheless, the responses of those interviewed in the Yakutat area appear to be reasonably candid with 22 percent claiming that they drank often, 60 percent who drank sometimes and 18 percent who never drank.

Drinking was seen as a problem principally by female and Indian respondents, plus those living within the City. The lack of social activities was also overwhelmingly a response from within the City, although it was cited almost equally by both sexes and by Indians and non-Indians. Race problems, on the other hand, were cited only by whites, with this particular group being fairly evenly distributed between the City and areas outside town.

The lack of social activities appears to be a factor in the opinion held by a majority of Yakutat respondents that the world outside is far more attractive, interesting and exciting than their own community. Those interviewed also believed that young people would have more opportunity for a better life if they left Yakutat, with a more than proportionate share of this group being Indian. Also relevant was the fact that about half of the people surveyed (of whom almost two-thirds were female) thought that if people from Yakutat moved out of town en masse, they would move to Anchorage.

The direct statement of the problem, the inference of greater social satisfaction to be had outside the Yakutat area and the increased rate of participation, especially among Indians interviewed, in the more organized activities such as dancing and basketball compared with a relative lack of participation in a range of informal activities, indicates the lack of a serious program of leisure time or social activities in Yakutat.

On the issue of race relations, only one white respondent thought that there was a lot difficulty involved in living and working around Indian people generally. Similarly, one Indian surveyed expressed the same view about living and working around whites. However, all told, approximately half of both the whites and Indians interviewed believed that there were at least some difficulties involved in generally living and working around each other. This degree of difficulty was substantially reduced in the case of whites or Indians who had lived in the Yakutat area a long time and was highest with whites or Indians who had just recently moved to the Yakutat area.

To some extent, the minor difficulties in race relations may be a result of a lack of understanding of the strong family ties binding Tlingit families generally and, on the other side, some intolerance by Indians toward the competitive nature of many whites and their use of time may be a factor. This is reflected in the beliefs of Indians surveyed, to a much greater extent that whites, that family ties are as strong as in the past; that pride in the old ways, although diminished, still exists; and that although people leave Yakutat for long periods of time for education and jobs and not all return, family life had not deteriorated in the view of about half of the Indians surveyed.

There was a strong divergence of opinion between the two major race groups over the ability of people to get along as they become more competitive. Whites tended to discount the effects of competition on interpersonal relationships to a greater extent. Further, almost all whites interviewed believed that there was never enough time to get all the things done that had to be completed. To some extent, this may also explain the mild differences in outlook on life and on community growth. Indians tended to be more optimistic about life getting better in the future. They favored community growth but tended to take a more decisive stand against the advent of large-scale wood products and oil and gas industry development in the Yakutat area. Whites, on the other hand, were divided in their optimism over life in the future although they too favored growth in the Yakutat area. They also opposed large-scale development in this area, but their opinions on this subject were generally more mixed.

Almost everyone interviewed had read a newspaper or a magazine within the past few days and most listened to the radio for considerable lengths of time each day, when possible. However, when it came to an important piece of local news such as the possible leasing of outer continental shelf areas in the Gulf of Alaska, one out of five persons surveyed had either not heard that this was being considered or were unsure if they had heard or not. This tends to demonstrate the lack of a means of disseminating local news since there is no local newspaper, radio or television although all three were desired by a majority of respondents.

To most people surveyed, the best things about living in Yakutat were things associated with small community living, such as the feeling of living in a small town and convenient hunting and fishing opportunities. In general, small town living can be said to offer people not only a pleasant escape from the more hurried existence of the larger communities, but it also permits more casual social relationships where visiting friends and relatives is extremely common. In fact, half of the respondents in the Yakutat area said they often visited friends and relatives and it was only a small group of Indians, almost all of whom lived in the City of Yakutat, who claimed they never went visiting.

Finally, there is the social interaction which exists between those living in the City of Yakutat and those living outside. The people surveyed who lived in the City contained a higher proportion of homeowners and a

higher proportion of those who intended to remain permanently or indefinitely in this area. Although their incomes tended to be more heavily weighted in the lower income groups, they wanted Yakutat's population to remain about the same rather than to grow and they viewed large-scale wood products and oil and gas industry development in the area unfavorably. As a means of maintaining more control over development, over 80 percent of City residents favored annexation despite the fact that these people did not believe the City was prepared to handle large-scale development. Still, some residents did think the City was capable of coping with such development.

More people interviewed who lived outside the City of Yakutat were renters than homeowners although this group had generally higher household incomes than City residents. In addition, residents from outside town were less committed to remaining in the Yakutat area permanently or indefinitely, although a large proportion (over 60 percent) thought they would do so. These people favored growth in the Yakutat area but tended to be more equally divided in their opinions over the merits of large-scale wood products or oil and gas industry development in the vicinity of the community. Furthermore, although no one here believed the City of Yakutat would be capable of handling the onshore development which could accompany offshore oil and gas exploration activities, they were in favor (71 percent) of the City of Yakutat annexing additional areas as a means of better controlling development.

In general, the differences between respondents living within the City of Yakutat and those living outside tend to be minor except for the basic attitudes toward growth and development. However, there does tend to be a general difference of opinion involving strong family ties, expecially among the Tlingits, which tends to result in more passive long term relationships on the one hand and a western work ethic which tends to produce a more aggressive and competitive relationship on the other. As a result, a majority of the respondents within the City favored a policy of opposition to growth and large-scale development while, outside the City, a majority of the respondents favored growth, but they were rather divided at the time of the survey as to the merits of large-scale development.

III. INTERPRETATION OF INDIVIDUAL SURVEY QUESTIONS

1. Have you always lived in this community?

A total of 18 persons, or 36 percent of those interviewed, had always lived in the Yakutat area (with approximately 80 percent of this group living within the city). Since Yakutat has survived as a traditional Tlingit community, it is not unexpected that all but 1 of the lifetime residents were Indian and that approximately 40 percent were 45 years or older.

On the other hand, of the remaining 64 percent interviewed who had migrated to the Yakutat area, 71 percent were white, while only 29 percent were native.

The more recent additions to the community tended to be in the more skilled professional/technical/managerial and clerical and the service areas of employment which were reflected in the generally higher incomes received by this immigrant group.

Educational levels of those who had migrated to Yakutat exhibited a complete absence of low level educational achievement, whereas those who had always lived in the community accounted for the 6 percent of all persons interviewed who had completed their formal education within grades 1 through 6, and the 6 percent within grades 7 through 9.

Those who had always lived in this community tended to be neither optimistic nor pessimistic about the future as reflected by their responses to the statement that "Life will generally get better during the next five years". However, they favored growth in the Yakutat area and tended to favor large-scale development.

2. If No, what community did you come here from?

Of the 32 people interviewed who had migrated to Yakutat, 34 percent came from another community in Southeast Alaska, with almost half of this group coming from Juneau. Thirty-four percent came from the remainder of Alaska, and 32 percent came from outside Alaska.

The largest migration of white residents to Yakutat came from outside Alaska where 9 of the 10 persons interviewed were white. Those from Southeast were more equally divided racially with 5 of the 11 persons interviewed being Indian. Of the 11 persons interviewed who came from the remainder of Alaska outside Southeastern Alaska, 3 were Indian and 8 were non-Indian. With regard to this particular group, it is interesting to note that 4

of the 11 persons opposed annexation as a means of insuring proper development of the Yakutat area.

Even though there was a reasonably even distribution among the predominant occupations, those from the remainder of Alaska outside Southeast were heavily concentrated in the professional/technical/managerial and the service areas. Also, these residents were almost all renters with 10 of the 11 households renting. They also tended to be pessimistic about the future and opposed to community growth and large-scale development.

It is also worth noting that although the people interviewed from the remainder of Southeast Alaska tended to be optimistic about the future if race relations are discounted, they were the most firmly opposed to major development in the wood products industry. This is important since this is the only area in Alaska where large-scale wood products activities have taken place.

On the other hand, those from the remainder of Alaska which includes Southcentral Alaska where large-scale oil and gas activities have taken place, tended to be strongly opposed to this industry with a high unfavorable reading and a low mixed reading.

3. Also, if No, what was your main reason for leaving that community?

Employment opportunity was the principal reason cited by those interviewed for leaving their previous communities. In fact, over 70 percent gave this reason. However, 14 of the 15 respondents giving this reason were white, while the reasons for most natives moving from their previous communities varied widely.

As might be expected, those who left their previous communities for employment purposes were generally concentrated in the higher income brackets. Also, they tended to desire growth in Yakutat and to be neither optimistic nor pessimistic about the future, but to be opposed to large-scale development.

4. Also if No, what was your main reason for moving to this community?

Of the 30 responses to this question, 43 percent cited employment, 30 percent pointed to the attraction of small community living offered by Yakutat, 20 percent had wished to return to their hometown and 7 percent offered a series of other reasons.

It is interesting to note that of the 13 responses citing employment as the main reason for moving to Yakutat, 12 respondents were white persons. The case was similar for those pointing to small

community living, where only 1 native person listed this reason. Conversely, returning to their hometown was the reason named by 5 out of 6 respondents, or 83 percent of the cases, by Indians as the reason for moving to Yakutat.

Those citing small community living as their main reason for moving to Yakutat were proportionately stronger in their opposition to annexation. Moreover, this group had a reasonably wide range of occupations with an upper middle income level tending to concentrate in the $15,000 to $19,999 range and as many renters as homeowners and buyers. This group tended to be opposed to growth and large-scale development. They were pessimistic about life getting better in the future and on future race relations.

A similar view of growth and large-scale development was held by those who gave hometown as the main reason for moving to Yakutat. This was a predominantly Indian group living in the city. Half of these people were employed in professional/technical/managerial occupations; however, they tended to have lower incomes, but they were somewhat more optimistic about the future.

The predominantly white group, with almost 70 percent living outside the city, who listed employment as their main reason for moving to Yakutat were almost exclusively employed in the professional/technical/managerial, the clerical and the service areas. They were in the higher income groups with incomes tending to concentrate in the $20,000 to $24,999 range, and a high level of educational achievement with half of the group continuing beyond high school. This group tended to favor growth although there was a degree of pessimism about the future and an unfavorable outlook on large-scale wood products and oil and gas industry development.

5. <u>What is the best reason you know of for staying in this community</u>?

Small community living was most often given as the best reason for remaining in Yakutat. Approximately 42 percent of the respondents to this question cited this reason. Another 38 percent of those responding gave hometown as the best reason and 19 percent pointed to employment.

Small community living was primarily a white response with only 6 out of 20 respondents being Indian. This group was primarily engaged in the professional/technical/managerial, the clerical and the service areas with incomes in the middle and upper middle ranges. This group also contained a higher proportion of renters than the other groups. They tended to be pessimistic about the future, slightly opposed to growth in the Yakutat area and extremely unfavorable to reasonably large-scale development in the Yakutat area by either the wood products or the oil and gas industries.

Those saying that the best reason for staying in Yakutat was that it was their hometown were predominantly Indian with 16 of the 18 respondents, or 77 percent, residing within the city. This group contained a high proportion of those in the fisheries industry and, as might be expected, yearly incomes were observed to be in the low end of the income range.

This group was neutral on the growth in the Yakutat area, with half of the respondents wishing the community to grow and half desiring the community to remain at its present population and development level. They were optimistic that life would get better in the future, although they did not expect race relations to improve. Perhaps paradoxically, they took the position of being moderately opposed to large-scale wood products development while favoring large-scale oil and gas development.

The 9 respondents, or approximately 19 percent of those interviewed, who cited employment as the best reason for remaining in Yakutat had a broad range of occupations with moderate to high incomes, and they were predominantly within the 25 to 34 age group. These respondents were firmly in favor of Yakutat growing, but they were divided on a large-scale wood products or oil and gas industry development. Furthermore, although they did not believe that life would get better during the next five years, they were divided on the subject of future race relations.

6. <u>What would be the best reason for leaving this community that you know of</u>?

Employment opportunity was cited by 36 percent of the respondents and education was mentioned by 6 percent as the best reason for them to leave Yakutat. However, these responses were the only answers of a positive nature. Approximately 13 percent mentioned community growth and development as the best reason for leaving and about 8 percent thought climate would be the major factor influencing them to leave. A wide variety of other reasons was given, totaling approximately 19 percent of all responses, which were predominantly negative in nature. And, finally, there were 17 percent who saw no reason to leave. Thus, if the status quo was maintained in Yakutat, it appears that at least half of the persons interviewed would not consider leaving.

It is interesting to note that of those who indicated they would leave for employment reasons, 65 percent were women. This group was also relatively young since it made up slightly over 50 percent of the age group 15 through 24 years of age. It also included 64 percent of the 5 person households surveyed. Approximately

three-quarters of these respondents were from the city and represented 45 percent of all the responses from within the city. Those who found employment the best reason for leaving Yakutat generally favored community growth but, at the same time, they tended to be pessimistic about life and race relations in the future and opposed to large-scale development.

Those who gave community growth and development as their best reason for leaving were more than 80 percent white and were more than 80 percent in favor of the community remaining at about the same size. And, although they were relatively optimistic about the future, as a group they were unfavorable to reasonably large-scale development.

A group of respondents which was totally white were those who cited the best reason for leaving as the weather.

The wide variety of essentially negative responses coded as "other" reasons represented the opinions of the group most favorably disposed towards growth and development.

About three-quarters of those who saw no reason to leave were Indian and over 60 percent lived within the city of Yakutat. This was a group with a proportionately higher educational achievement but which was reasonably well divided on its perceptions of the future, growth and development.

7 8. 9. What do you think are the two or three most important problems right here in this community today?

When the two or three most important problems in Yakutat were reviewed in the aggregate, community facilities with 24 responses led the list. This was followed by unemployment with 15 responses, no social activities with 12 responses, drinking with 11 responses, housing with 8 responses, a lack of buyable land with 7 responses, inadequate transportation services with 7 responses and race relations with 5 responses. The remainder of the responses totaled 11 and there were no answers in 50 cases. Thus, there was an average of 2 replies per person.

While the aggregate numbers tend to provide more insight into the problems affecting all of the respondents, the initial response tends to single out the most precise problem affecting the individual respondent. The array of these initial responses was as follows: drinking, 14 percent; community facilities, 14 percent; housing, 12 percent; no social activities, 12 percent; unemployment, 10 percent; lack of buyable land, 8 percent; race relations, 8 percent; and inadequate transportation services, 6 percent.

Of the 7 respondents who identified drinking as the most important problem in Yakutat, 6 of the 7 were female and 6 of the 7 were also Indian. In addition, it was also interesting to note that both the

problems relating to lack of buyable land and race relations were seen as problems by whites exclusively. Furthermore, the lack of buyable land was seen as a problem only by persons living outside of Yakutat. On the other hand, the lack of social activities was seen as a problem only by persons from the city of Yakutat. Finally, in the initial responses unemployment was seen as a problem by a majority of the respondents between 45 and 64 years of age.

10. Now, what are the two or three really good things about this com-
11. munity?

No respondent gave more than two answers on the good things about Yakutat. Also, the array of responses from most important to least important does not significantly change from the initial to the secondary response. Therefore, the aggregate, the initial and the secondary responses are essentially the same.

When the individual answers of the respondents are tabulated in the aggregate, small town feeling or small town living was cited by 37 of the respondents. This was followed by good hunting and fishing with 24 respondents and a pleasant natural setting with 19 respondents. Less often cited was community facilities with 6 respondents. In addition, there were 5 other individual responses as well as 9 respondents who did not answer either of the two questions.

A look at the initial responses to this question indicates that 38 percent believed a small town feeling or small town living to be the most important good thing about living in Yakutat, 25 percent considered good hunting and fishing opportunities to be the best reason and 22 percent believed that the natural setting was the best thing about the community. Community facilities were the best thing about the community to 8 percent, 4 percent had other individual reasons, and 4 percent did not answer the question.

Of the 19 respondents citing small town feeling as the best reason, 11 were white. This group was largely homeowners with only one respondent opposed to annexation by the city of Yakutat. As might be expected it was split on whether or not Yakutat should grow and tended to be opposed to large-scale development although many respondents remained mixed on their views of this activity.

Those who cited good hunting and fishing as the really good thing about Yakutat, as might be expected, were two-thirds male and, although this was predominantly a home ownership group, a third of the respondents opposed annexation. This group also tended to favor growth in the Yakutat area and also to favor large-scale wood products and oil and gas industry development.

Those who mentioned the natural setting as the really good thing abou Yakutat were predominantly Indian. Of the 11 respondents in this

group, 8 were Indian with 8 being renters and 4 of the 11 being opposed to annexation. This group was definitely in favor of growth in the Yakutat area; however, it tended to be strongly opposed to large-scale development.

12. If you heard that most people who live in this community were moving to another town, what town do you think they would be moving to?

If people surmised that their neighbors were leaving town, it is interesting that almost half (46 percent) believed they would be going to Anchorage. And, although only 4 percent claimed they thought people would leave Alaska, only 18 percent thought they would remain in Southeast Alaska. Many people interviewed (20 percent) had no idea where people from their community would go if there was a mass out-migration. However, while those who had no idea were fairly evenly split between males and females, it was the females by an almost two-thirds to one-third majority who thought that most people would be moving to Anchorage. It was also the Indians by the same margin over the whites who believed people would be moving to Anchorage. This same group was predominantly renters who favored growth in Yakutat, but who were overwhelmingly opposed to major wood products or oil and gas industry developments.

13. How long do you and your family intend to remain in this community?

Almost three-quarters (74 percent) of the people surveyed indicated that they intended to remain in the Yakutat area indefinitely or permanently. Discounting the 14 percent who did not know how long they intended to stay in this community, those who intended to remain indefinitely or permanently in the Yakutat area represented 86 percent of those surveyed. There was also a higher proportion of persons living in the city of Yakutat who intended to remain indefinitely or permanently in the area.

14. Do you consider Yakutat to be a small community, a medium sized community or a large community?

The response to this question that is significant was that 20 percent of those persons interviewed thought Yakutat to be other than a small community. Sixteen percent believed Yakutat to be a medium sized community, while 4 percent believed it to be a large community.

15. Would you like to see the community of Yakutat grow, remain the same or decrease in population?

Exactly half of the people interviewed indicated that they would like to see Yakutat grow, whereas 40 percent wanted it to remain the same. Two percent would have liked to have seen the population decline and 8 percent had no opinion.

Those surveyed who expressed a desire for growth in the Yakutat area were primarily homeowners who saw life getting better in the future and, although their opinions overall indicated that there would be a worsening of race relations in the future, this was also the only group in which individuals thought race relations would get better. They also favored large-scale wood products and oil and gas development and a higher proportion of the people lived outside the city limits.

On the other hand, those interviewed who wished Yakutat to remain the same or decrease contained a greater proportion of the renters in the Yakutat area. As a group, these people were almost equally divided on life getting better or worse in the future. However, when it came to race relations, they saw no improvement likely in the future. This group was strongly opposed to large-scale wood products and oil and gas development and its representation was higher within the city of Yakutat.

16. How many people would you like to see in this community?

Discounting those interviewed who gave a "don't know" answer, 46 percent of the respondents desired the community to remain under 600 persons, an additional 12 percent wished the community to be less than 1,000 persons and 16 percent wanted the community to be between 1,000 and 1,499. Therefore, almost three-quarters (74 percent) of those who directly responded to this question preferred Yakutat's population to remain under 1,500.

As could be expected, those who wished the community population to remain under 600 were almost totally opposed to growth with only one respondent favoring limited growth. Similarly, the remaining groups favored growth with the exception of one respondent who assumed the present population to be 600 persons.

Among those who desired a community with a population of under 600 were a proportionately higher number of renters who were not highly optimistic on life getting better and who uniformly believed race relations would worsen in the future. They were unfavorable to large-scale wood products and oil and gas industry development and they were relatively equal in proportionate representation in and outside the city of Yakutat.

17. Culture basically consists of ideas, customs, skills, arts,
18. etc. of a given people in a given period of time. What is im-
19. portant in the Yakutat culture to you? Can you name three or four things?

The primary response to this question showed that 34 percent felt arts and crafts to be the most important thing in the Yakutat culture, followed by 26 percent who listed language. Ten percent believed subsistence to be the most important and 8 percent thought dancing and general lifestyle and customs to be of primary concern.

The secondary responses also showed arts and crafts, with 20 percent of the responses, to be the most important item in the Yakutat culture. This was followed closely by dancing with 18 percent and subsistence and language at 10 percent each. Tertiary responses still showed arts and crafts as being the dominant factor in the Yakutat culture and this was followed closely by language, dancing and general lifestyle and customs.

An analysis of the primary response showed arts and crafts as being important to both male and female and Indians and whites alike. However, the retention of the Tlingit language was favored by females more than two to one over males and was more important to Indians. It should also be noted that those who cited language were reasonably evenly split on wanting Yakutat to grow, but highly unfavorable toward large-scale wood products and oil and gas industry development. The same pattern was followed by those who felt subsistence to be the most important factor in the Yakutat culture. Finally, it is interesting to note in the initial responses that general lifestyle and customs was an exclusively white response.

20. The culture of Yakutat is complex. Historically, the dominant culture has been Tlingit. This has been influenced in recent times by the white culture of the western world. The product of these two cultures is a culture that is a part of everyone in the Yakutat area. Do you fear the loss of this culture?

Sixty-eight percent of those interviewed feared the loss of Yakutat's culture. This group was evenly divided among males and females, as it was among Indians and non-Indians. As a group these people tended to be more optimistic about the future; however, they were highly unfavorable to reasonably large-scale wood products and oil and gas industry development. And, proportionately, there was a greater representation from outside the city.

21. If the Tlingits in Yakutat become a small ethnic minority, do you think this would be a good thing or a bad thing, or wouldn't it make any difference?

Perhaps the most significant conclusion from this question is that only one person, representing 2 percent of those interviewed, thought it would be a good thing if the Tlingits in Yakutat became a small ethnic minority. Forty-two percent thought it would be a bad thing, and 40 percent thought that there would be no difference. It is interesting to note that there was an almost equal response in this opinion from both males and females and Indians and whites; however, those that thought it was a bad thing contained a higher proportion of the higher income groups, and a higher proportion of those who had achieved more schooling. Although this group was favorable to growth in the Yakutat area, it was highly unfavorable to large-scale wood products and oil and gas industry development.

22. If Good, why?

It is significant that only one individual thought it would be a good thing if the Tlingits in Yakutat became a small ethnic minority. This one individual was a male Indian who was highly optimistic about life and growth and development in Yakutat.

23. If Bad, why?

Of the 21 persons responding to this question, 9 thought that the loss of identity as a distinct culture was the most important factor although 7 thought that loss of voice of the Tlingits was important. Two offered other reasons and 3 did not know why. Loss of identity tended to be more heavily a white response, while loss of voice was more often cited by Indians.

All but one of those who directly answered this question favored annexation. This group tended to have higher incomes and, proportionately, had more education. Although these people wished Yakutat to grow, they were unfavorable to a large-scale wood products and oil and gas industry development.

It is also of interest here that all those who cited a loss of voice if the Tlingits in Yakutat became a small ethnic minority were from the city of Yakutat, although there was no significant difference in terms of respondents' sex or race.

24. Do you believe the following combinations of industries to be reasonably compatible or incompatible?

Commerical fishing and the tourism and recreation industry.

In answer to this question 68 percent thought commercial fishing and the tourism and recreation industry were compatible. Twenty

percent believed them to be incompatible, and 12 percent did not know whether they were compatible or not.

Of those believing these industries to be compatible, over 60 percent of the respondents were male and also over 60 percent were white. This group consisted of people with higher incomes and more advanced education who were favorable to growth in Yakutat. Also they were more optimistic concerning the future and less unfavorably inclined towards large-scale wood products and oil and gas industry development. In addition, there was a proportionately higher number of respondents outside the city who believed these industries to be compatible.

On the other hand, those who believed commercial fishing and the tourism and recreation industry to be incompatible were nine to one Indian over white, and eight to two inside city residents to outside city residents. They were equally divided on growth and proportionately higher in terms of renters to owners. This group was also pessimistic about the future and was unfavorable to large-scale wood products and oil and gas industry development.

25. Commercial fishing and the timber industry.

The commercial fishing and the timber industries were seen as compatible to 64 percent of those interviewed. Twenty-eight percent viewed them as being incompatible and 8 percent did not know whether they were compatible or not.

Those viewing these industries as being compatible included a higher proportion of females than males and a higher proportion of whites than Indians. As a group these people wanted growth in Yakutat; yet, they had reasonably mixed opinions on large-scale wood products and oil and gas industry development. This group consisted of a proportionately higher number from outside the city, and it is interesting to note that a higher proportion of this group than the overall average was opposed to annexation by the city of Yakutat.

On the other hand, those who viewed these industries as being incompatible were primarily male and primarily Indian and, although they were reasonably divided over community growth, they viewed large-scale wood products and oil and gas industry developments unfavorably. However, perhaps the most significant factor concerning this group is the fact that 13 of the 14 respondents lived within the city of Yakutat.

26. Commercial fishing and the oil and gas industry.

In response to this question, 32 percent believed that commercial fishing and the oil and gas industry were compatible, while 38

percent believed them to be incompatible and a relatively large 30 percent did not know whether they were compatible or not.

Those that believed these industries to be compatible were very much in favor of growth in Yakutat and they favored the development of large-scale wood products and oil and gas industries. They were optimistic in the sense that they believed life would get better and race relations would improve in the future. This group was represented by a larger percentage of respondents from outside the city of Yakutat, but exhibited less than proportionate opposition to annexation by the city of Yakutat.

While a greater number of respondents thought that commercial fishing and the oil and gas industry were incompatible than compatible, a large number of people were undecided. In all probability this indecision is based on the lack of knowledge of the oil and gas industry. Those who viewed these industries as being incompatible included twice as many Indians as whites. This group opposed growth in Yakutat by more than a two to one margin and came out strongly against large-scale wood products and oil and gas industry development. Most of these respondents lived within the city of Yakutat.

Those who were undecided about the compatibility of the commercial fishing and the oil and gas industries tended to favor growth in Yakutat and expressed mixed opinions of large-scale wood products and oil and gas industry development.

27. Commercial fishing and subsistence hunting and fishing.

Eighty-six percent of the respondents thought that commercial fishing and subsistence hunting and fishing were compatible. Twelve percent believed them to be incompatible and only 2 percent did not know. Of the 6 persons interviewed believing these industries to be incompatible, 5 were female and 5 were Indian. In addition, 5 out of the 6 were from within the city of Yakutat.

28. Tourism and recreation and the timber industry.

Most people interviewed (56 percent) thought that tourism and recreation and the timber industry were compatible. Thirty-four percent believed these two industries to be incompatible, and 10 percent did not know whether they were compatible or not.

Among those who thought these industries were compatible, males outnumbered females and whites outnumbered Indians. This group wanted Yakutat to grow but, despite considering this industry mix to be compatible, was almost two to one opposed to large-scale wood products industry development.

Persons who believed these industries to be incompatible were predominantly female and predominantly Indian, with a higher proportion being from within the city of Yakutat. They were equally divided on whether or not Yakutat should grow, but were opposed to large scale wood products and oil and gas industry development.

29. Tourism and recreation and the oil and gas industry.

Over half of the respondents (54 percent) believed that the tourism and recreation industry and the oil and gas industry were compatible. Twenty-six percent believed them to be incompatible, and, as before, with questions relating to the oil and gas industry, there was a high percentage of people who did not know.

In the group which believed these industries to be compatible there were more males than females and whites slightly outnumbered Indians. This group was optimistic about life getting better in the future. It was very much in favor of growth in the Yakutat area, but tended to oppose any major wood products industry development in the Yakutat area. On the other hand, it tended to favor large-scale oil and gas industry development although many of this group registered mixed opinions on that subject.

Those who believed these industries to be incompatible were more than two-thirds Indian and of the 13 respondents, 11 came from within the city of Yakutat. This group was strongly in favor of Yakutat remaining the same in terms of growth and was highly unfavorable to large-scale wood products and oil and gas industry development.

It is also of some interest to take a look at those who did not know whether or not the tourism and recreation and oil and gas industries were compatible. This group was almost evenly divided in terms of sex, race, home ownership, life getting better in the future and all aspects of growth in the Yakutat area.

30. Tourism and recreation and subsistence hunting and fishing.

In response to this question, 72 percent of those interviewed believed these activities were compatible. Twenty percent thought them to be incompatible and 8 percent did not know whether they were compatible or not.

Of the group which believed these industries to be compatible, approximately 56 percent were male and 56 percent were white. As a group, these people wanted to see Yakutat grow and they were highly favorable to large-scale wood products industry development.

Of those who believed these industries to be incompatible, 70 percent were native, and 70 percent resided within the city of Yakutat. This group also responded unfavorably to a large-scale wood products industry operation in the Yakutat area.

31. Timber industry and the oil and gas industry.

Although 60 percent of the respondents believed the timber industry and the oil and gas industry to be compatible and only 18 percent believed them to be incompatible, there was again a high degree of uncertainty associated with the oil and gas industry as 22 percent of those interviewed did not know whether these industries were compatible or not.

It is interesting to note that all of those who believed these industries to be incompatible were Indian and all lived within the city of Yakutat. These particular respondents were highly pessimistic and opposed population growth in the Yakutat area. Furthermore, they were very much opposed to both large-scale wood products and oil and gas industry development.

32. Timber industry and subsistence hunting and fishing.

On the subject of this industry mix, 56 percent thought that these industries were compatible, 36 percent considered them to be incompatible and only 8 percent did not know whether they were compatible or not.

The group which believed these industries were compatible was mostly male and mostly white. These people were also largely in favor of growth in the Yakutat area, but although they tended to be opposed to a local large-scale wood products industry, they were equally divided on oil and gas industry development. This group was relatively pessimistic about life getting better in the future and consisted of a proportionately greater number of homeowners, with a proportionately greater number living outside the city of Yakutat.

On the other hand, these industries were viewed as being incompatible by a group which was largely female and largely Indian. These people opposed growth in the Yakutat area and also opposed large-scale wood products and oil and gas industry development. More than 80 percent resided within the city of Yakutat with half being homeowners and half renting.

33. Oil and gas industry and subsistence hunting and fishing.

Almost half (48 percent) believed these industries to be incompatible with 32 percent believing them to be compatible and 20 percent not knowing.

Those who believed these industries to be incompatible were mostly male and mostly white. They wanted to see Yakutat grow and favored large wood products and oil and gas industry development. In addition, they tended to be optimistic about the future, were two to one homeowners over renters, and represented more than 50 percent of the total of those interviewed outside the city.

On the other hand, those who believed these industries to be incompatible were predominantly female and Indian by almost a three to one margin. This group was evenly split on growth in the Yakutat area, but was opposed to large-scale wood products and oil and gas industry development. These people tended to be more pessimistic about the future and consisted of a higher than proportionate amount of renters of which a higher than proportionate amount lived within the city of Yakutat.

In general, regarding those who considered this industry mix to be compatible, it can be said that this group was composed of more males than females, more whites than Indians, proportionately more people from outside the city than from within, respondents with optimistic views about the future and who wanted to see Yakutat grow.

On the other hand, it can be said that those who viewed these industries as being incompatible included more females than males and more Indians than whites. This group lived predominantly within the city of Yakutat. It was composed of a high proportion of renters and it contained respondents who were more pessimistic about the future and who desired Yakutat to remain the same rather than grow.

34. How long have you lived in this house?

Of those interviewed, 78 percent had lived in their present homes for five years or less. In fact, 64 percent had lived in their present homes for two year or less. However, while both whites and persons living outside the city of Yakutat were distributed fairly evenly among the various length of residence categories, a large majority of the Indian people interviewed and those who lived within the city of Yakutat, had lived in their present homes two years or less.

35. Do you own this house, are you in the process of buying it, or do you rent it?

Of those persons interviewed in the Yakutat area, 28 percent owned their own homes, 26 percent were buying their homes, 42 percent were renting and 4 percent were living rent free in the homes of relatives

Those who were buying homes in the Yakutat area tended to be very much in favor of community growth; however, they were opposed to large-scale wood products industry development while, at the same

time, favoring oil and gas industry development. Of the 13 respondents in this group, 11 lived within the city of Yakutat.

Those who were renting generally wanted the population of the Yakutat area to remain the same. They had unfavorable opinions on large-scale development in the wood products and oil and gas industries and had a greater than proportionate representation from outside the city of Yakutat. In addition, a relatively high proportion of this group opposed annexation.

36. Are you satisfied with this house as a place for you and your family to live?

More than half of those interviewed in the Yakutat area (52 percent) were satisfied with their present housing. Forty-four percent were not satisfied and 4 percent had no opinion.

Of those who were satisfied, a greater number were male, and a greater number were white. This same group favored growth in the Yakutat area, although it was opposed to large-scale wood products industry development. A relatively large proportion of this group was from outside the city of Yakutat and it was also more than proportionately opposed to annexation.

On the other hand, the group which was not satisfied with its housing contained more females than males and twice as many Indians as whites These people tended to want Yakutat to remain the same and were opposed to large-scale development. Most were renters who resided within the city of Yakutat and tended to be pessimistic about life getting better in the future.

37. If Yes, what do you most like about this house?

The 26 respondents who were satisfied with their housing cited a wide variety of reasons for their satisfaction. Six respondents cited good heating and utilities, 5 pointed to the convenient location of their housing units, owning their own homes was most important to 5 respondents, a scenic view was important to 3 respondents and 7 others cited a wide variety of other reasons.

The cross-tabulations show two points of interest. The first is that those who listed ownership as the thing they liked most about their homes were all in favor of community growth. The second was that those who appreciated good heating and utilities tended to be more optimistic and more favorably disposed towards large-scale wood products and oil and gas industry development.

38. If No, what do you most dislike about this house?

Of the 22 respondents to this question, 10 or almost half listed

inadequate space as the principal thing they dislike about their present housing. Five cited the poor condition of their homes with 3 listing inadequate utilities, and 4 persons citing other inadequacies.

Inadequate space was predominantly a female response and the primary response from those from within the city. Poor condition and inadequate utilities were overwhelmingly an Indian response and were cited only by city residents.

39. Are you, or anyone who lives in this house, related to the people who live in any of the four closest houses?

Almost half of those interviewed, or 44 percent, were related to at least one person in one of the four houses closest to their own house. Of the 22 persons surveyed who lived next to relatives, 12 were related to persons in only one adjacent house, 2 were related to persons in two adjacent houses, 3 were related to persons in three of the four houses closest to theirs and 5 were related to persons in all four houses closest to their homes.

A breakdown by race indicates that 22 percent of the whites and 62 percent of the Indians were related to persons in at least one adjacent house, as were 53 percent of those interviewed from within the city of Yakutat. Outside the city, on the other hand, only 28 percent lived next to relatives.

It is also of interest to take a look at the group which was not related to anyone in the four houses closest to their own house. While this group represented 56 percent of those interviewed, it represented over 75 percent of those who opposed annexation. It also represented 80 percent of those who did not believe that life would get better in the future and, although these people favored community growth, they opposed large-scale wood products and oil and gas industry development.

40. How many feet away is the closest house to your house?

Of those interviewed, 22 percent estimated that the closest house to their house was less than 20 feet away. Twenty-four percent estimated the distance to be between 20 and 50 feet, 26 percent estimated the distance to be 51 to 100 feet away and 26 percent claimed the nearest house was over 100 feet away. One respondent did not know how close his neighbor's house was.

Not surprisingly, 9 of the 11 persons who lived less than 20 feet from their neighbors were in rental housing.

It is also worth noting that 13 respondents which lived over 100 feet from the closest house were overwhelmingly made up of homeowners, with 12 of the 13 either owning or buying a home. These persons were less pessimistic than any group on the subject of future race relations and were overwhelmingly in favor of Yakutat growing. Although they had mixed reactions to large-scale wood products industry development, they were highly favorable to oil and gas development in the Yakutat area. And, it is also interesting that 11 of these 13 respondents lived within the city of Yakutat.

41. Do you feel more comfortable having your house located close to your neighbors' houses or do you prefer your house to be located further away from them?

More than half (56 percent) of those interviewed said they would like to be located further away from their neighbors' houses, while only 12 percent wanted to be located closer. Location relative to to their neighbors' houses made no difference to 28 percent and 4 percent had no opinion.

The group of respondents which wanted to be located further away included 7 of the 9 negative opinions on annexation. This group, which was comprised of more renters than homeowners, was extremely pessimistic about the future and, although almost evenly split on community growth, highly unfavorable to large-scale development.

On the other hand, a majority of those who claimed it made little difference whether they were closer to or further away from their neighbors' houses were Indian. This group voiced no negative opinion to annexation, was overwhelmingly in favor of Yakutat growing and was favorable to large-scale wood products and oil and gas industry development. Also, these people were optimistic about the future and were predominantly homeowners.

42. If close, why?

The only response to this question cited by more than one person was living closer for reasons of security. All 3 citing this were female.

43. If close, how close?

The six applicable answers to this question ranged from 4 feet to 75 feet, with the average being approximately 40 feet.

44. If further away, why?

Nineteen of the 28 respondents to this question, or over two-thirds, cited privacy as the principal reason for being located further

away from their neighbors. More yard space was cited by 5 respondents and 4 listed other reasons with 2 of these being related to fire protection. It is interesting to note that over 60 percent of those desiring privacy were female, while almost 90 percent of those desiring more yard space, better fire protection or other reasons for living further away from their neighbors, were male.

45. If further away, how far?

Approximately two-thirds of those responding indicated they would prefer to be located more than 200 feet away from their nearest neighbor. Of the 15 persons who gave this answer, 10 were white. This group was predominantly made up of renters in favor of Yakutat's population remaining about the same while being pessimistic about the future and being unfavorable towards large-scale wood products and oil and gas industry development.

46. It is less expensive to build housing with sewer, water and electric hookups where houses are placed reasonably close together. If you had a choice between a house with more interior space located closer to other houses (say 15 to 20 feet apart) or a house with less interior space located further away (say 40 feet or more between houses), which would you choose?

The answers to this question were consistent with those given to question 41. Almost 70 percent of those who expressed an opinion were in favor of having their homes located further away with less interior space rather than the alternative of having them located closer together, but with more interior space. Both sexes responded almost identically to this question; however, a greater proportion of Indian residents (although not a majority) indicated they would prefer more interior space with higher densities, whereas a greater proportion of white people interviewed preferred less interior space with lower housing densities. Similarly, those living inside the city proportionately preferred more interior space and higher densities (although again not a majority), while those outside the city proportionately favored less interior space with lower densities. It should also be noted that the group which preferred more interior space contained a large proportion of renters.

47. What job skills do you have? List two or three if possible.
48.
49. Persons interviewed listed a reasonably wide variety of job skills. A single exception was bench work skills for which there is little demand in the Yakutat area or, for that matter, in most Alaska communities. This is because most repair or fabrication requiring bench work results in equipment or orders being obtained from Anchorage or Seattle.

The greatest number of primary skills listed were in the clerical and sales area, where 24 percent of those interviewed claimed skills. However, it should be noted that this group was almost exclusively female. The service area claimed 18 percent of those interviewed, with both the professional/technical/managerial and structural work areas being cited by 12 percent. Ten percent had no specified skills, while the categories of processing, machine trades and farming, fishing and forestry had 6 percent each.

It should also be noted that the trades block which includes the processing, machine trades, bench work, structural work and miscellaneous skills categories strongly supported growth in the Yakutat area. Furthermore, although this group was divided in its opinions on the merits of large-scale development, it in fact tended to favor reasonably large-scale oil and gas development in the Yakutat area. In addition, this trades group was predominantly from within the city of Yakutat.

50. Have you taken any training courses designed to lead to employment during the past five years?

Twenty-eight percent of those interviewed had taken a training course designed to lead to employment during the last five years. This group was reasonably pessimistic about the future, was proportionately low in home ownership, and was slightly favorable to growth in the Yakutat area, but strongly opposed large-scale development.

On the other hand, those who had not taken training courses during the past five years tended to be more optimistic and were not unfavorable to large-scale wood products and oil and gas industry development. They had more of a mixed reaction to these industries and formed a proportionately larger number of those living within the city of Yakutat.

51. If Yes, what training course(s) did you take?

Each of the 14 respondents who had taken training courses took them in different areas. These courses ranged from management and counseling to tax assessing and typing.

52. Do you think that training courses are worthwhile?

There was not a single person surveyed who thought that training courses were not worthwhile.

53. If No, why not?

Since all of the respondents thought training courses were worthwhile, there were no responses to this question.

54. Would you be interested in taking a training course outside of Yakutat if a good job awaited you upon your return?

Of those who answered this question, 76 percent indicated they would be interested in taking a training course outside Yakutat if a good job awaited them upon their return, 22 percent were not interested and only 2 percent did not know.

Those interested in taking training courses outside Yakutat were mostly female and Indians substantially outnumbered whites. In addition, a majority of persons in every occupation group was interested in taking training courses outside Yakutat including all persons engaged in service occupations.

55. Do you think that on-the-job training is worthwhile?

All persons interviewed expressed the opinion that on-the-job training was worthwhile.

56. Would you be interested in on-the-job training if a job you desired was offered to you?

Fully 90 percent of those interviewed felt they would be interested in on-the-job training if it were offered to them, with only 10 percent not interested. The group of 5 respondents not interested included 3 with occupations in the professional/technical/managerial area and 2 from the fisheries/forestry area with incomes of these people ranging from lower middle to high levels.

57. Do you belong to a union?

Sixteen percent of those persons surveyed belonged to a union, while 84 percent were non-union. Aside from having a higher proportion of renters who wished Yakutat to remain the same, union membership tended to be favorably disposed towards large-scale development despite being rather pessimistic about the future. All union members were male.

58. If Yes, which union?

Two people were members of the Teamster's Union, with the other 6 being from separate widely diverse unions.

59. Have you attempted to get work in the wood products industry (logging)
60. in the Yakutat area?
61.

Eight respondents, or 16 percent of those interviewed, had attempted to get work in the local wood products industry. All 8 had been

employed by that industry. The most interesting cross-tabulation for people in this group was their opposition to a major wood products industry development in the Yakutat area.

62. Will you attempt to get work with the oil and gas industry if development takes place in this area?

A total of 40 percent of the people surveyed indicated that they would attempt to get work with the oil and gas industry if development takes place in the Yakutat rea. Forty-eight percent stated that they would not and 12 percent did not know. Of those who said they would attempt to get work in this industry, males slightly outnumbered females and Indians outnumbered whites by almost two to one. This group appeared committed to Yakutat. It included a large number of homeowners and buyers. These people were also relatively optimistic and wanted Yakutat to grow by almost a two to one margin. They had rather mixed views on a large-scale wood products industry in the Yakutat area; however, they tended to favor oil and gas industry development. Furthermore, most of this group came from within the city of Yakutat.

On the other hand, those who said they would not attempt to get work with the oil and gas industry were predominantly renters who were equally divided on the subject of population growth in the Yakutat area and opposed to large-scale wood products and oil and gas industry development. This group was composed of a higher proportion of persons from outside the city of Yakutat.

63. If Yes, do you think you will be successful?

Of the 20 persons interviewed who said they would attempt to get work with the oil and gas industry if development takes place in the Yakutat area, 14 thought they would be successful in gaining employment, while 3 thought that they would be unsuccessful and 3 did not know.

64. If Yes to 63, why?

Of the 14 persons who thought they would be successful in getting a job with the oil and gas industry if development takes place in the Yakutat area, 9 felt that they generally qualified for employment in that industry, while 5 felt qualified for a specific job.

65. If No to 63, why?

The 3 persons interviewed who did not think they would be successful in obtaining employment with the oil and gas industry felt that they were simply too old. The cross-tabulation with age indicated that 2 of these people were in the 45 to 64 year old range, while 1 was over 65 years of age.

66. Let me ask you some sensitive questions about race. As you know, it is easier to live and work around some people more than others. This goes for white people, Indian people and others. Not speaking for yourself, but for people in general in this community, do you feel there is a lot of difficulty, a little difficulty, or no difficulty at all living and working around:

(Asked of Indians only) White people generally?

Of the 22 Indian people responding in behalf of Indians generally in this community, only one found a lot of difficulty living and working around white people. Ten thought there would be a little difficulty, and 11 thought there would be no difficulty at all. Perhaps the important factor is that 50 percent of the Indians responding to this question found there was some difficulty in living and working around white people in general. Ten of these 11 people finding some difficulty were from within the city of Yakutat and all 11 favored annexation; whereas, those finding no difficulty living and working around white people generally favored annexation but to a lesser degree. In terms of growth and development there was little difference between those having some difficulty and those having no difficulty except for large-scale development in the oil and gas industry which tended to be supported by those encountering no difficulty in living and working around white people generally.

67. (Asked of Indians only) White people who have lived in the Yakutat area a long time?

Although a lot of difficulty was still envisioned by 1 respondent, a little difficulty living and working around whites who have been in the Yakutat area a long time was envisioned by only 7 respondents. The remaining 14 respondents saw no difficulty in living and working around this group of white people. Therefore, only 36 percent of those responding to the question foresaw some difficulty, and 64 percent saw no difficulty at all. This represented a net shift of 3 persons who foresaw a little difficulty with whites in general to those who saw no difficulty living and working around white people who have lived in the Yakutat area for a long time. There was also a more favorable shift in opinions on large-scale wood products and oil and gas industry development in the Yakutat area.

68. (Asked of Indians only) White people who have just recently resided in the Yakutat area?

Only 20 of the Indians surveyed responded directly to this question. Of these, 6 foresaw a lot of difficulty, 7 foresaw a little difficulty and 7 foresaw no difficulty. As might be anticipated, fully 65 percent saw some difficulty in living and working around white people who had just recently settled in the Yakutat area.

69. (Asked of whites only) Indian people generally?

Not speaking for yourself, but for people in general in this community, do you feel there is a lot of difficulty, a little difficulty, or no difficulty at all living and working around Indian people generally?

Only 1 white person interviewed felt there would be a lot of difficulty living and working around Indian people generally. Nine persons interviewed felt there would be a little difficulty and 11 persons felt there would be no difficulty at all. In terms of percentages, 48 percent believed there would be some difficulty, while 52 percent believed that there would be no difficulty. This result was almost identical to the position taken by Indians on white people generally.

Those who foresaw some difficulty favored Yakutat's growth, although they tended to be somewhat opposed to a large-scale wood products or oil and gas development. These respondents also tended to be somewhat pessimistic about the future and represented a large proportion of renters surveyed.

On the other hand, those who saw no difficulty tended to want Yakutat to remain the same, but they were strongly mixed on large-scale development, especially oil and gas industry development, where 10 of the 11 respondents had mixed opinions and no one took either a favorable or unfavorable position.

70. (Asked of whites only) Indian people who have lived in the Yakutat area a long time?

A total of 22 of the 23 whites interviewed responded directly to this question. There remained 1 person who foresaw a lot of difficulty living and working around Indian people who have lived in the Yakutat area a long time. Nine foresaw a little difficulty and 12 foresaw no difficulty. Therefore, a total of 45 percent foresaw some difficulty in living and working around Indian people who have lived in the Yakutat area a long time and 55 percent foresaw no difficulty in living and working around these people.

It is interesting that those who foresaw some difficulty again maintained the position that they wanted Yakutat to grow, but tended to be mixed on both large-scale wood products and oil and gas industry development. On the other hand, those who saw no difficulty tended to want Yakutat to remain the same, and although they tended to be opposed to large-scale development, their opinions were overwhelmingly mixed.

71. (Asked of whites only) Indian people who have just recently resided in the Yakutat area?

Only 17 of the whites interviewed responded directly to this question. Two people foresaw a lot of difficulty, 7 a little difficulty and 8 thought there would be no difficulty at all in living and working around Indian people who had just recently settled in the Yakutat area. However, just as with the arrival of new white people, Indian people who had only recently moved to the Yakutat area were foreseen by the majority of the white people responding to this question (53 percent) as posing some difficulty, with 47 percent foreseeing no difficulty.

Again, those whites who envisioned some difficulty with Indian people who had recently settled in the Yakutat area wanted Yakutat to grow. And, they tended to be reasonably divided over large-scale wood products and oil and gas industry development. On the other hand, those who foresaw no difficulty tended to want Yakutat to remain the same and also tended to be opposed to large-scale development, although they were essentially mixed on reasonably large-scale oil and gas industry development.

72. Do you think that the relationships between the Indians and the whites will get better or worse if there is rapid growth in the Yakutat area, or doesn't it make any difference?

A total of 39 persons responded to this question. Only 4 respondents or approximately 10 percent, believed that relations between Indians and whites would improve if there was rapid growth in the Yakutat area. Twenty-one respondents, or 53 percent, thought relations would worsen and 14 respondents, or 36 percent, felt growth would make no difference.

Three of the 4 who thought relations would improve with growth were white. All members of this group were home buyers who favored community growth and had generally favorable opinions of both large-scale wood products and oil and gas industry development. The group had a high educational achievement and 3 of the 4 respondents were from within the city of Yakutat.

Of the 21 who foresaw a worsening situation more were renters than owners and, although divided, these people essentially wanted Yakutat to remain the same. Theey were also strongly unfavorable toward large-scale wood products and oil and gas industry development.

Those who saw no difference in future race relations with rapid growth in the Yakutat area were predominantly homeowners tending

to support community growth but who were reasonably well divided on the question of large-scale wood products and oil and gas industry development in the Yakutat area.

In general, those who tended to think that relations between Indians and whites would improve with rapid growth and those who thought growth would make no difference tended to be optimistic and tended to favor community growth and development. On the other hand, those who saw relations between Indians and whites deteriorating because of rapid growth appeared to be pessimistic and against change. A large portion did not want growth and development and most were from within the city.

73. Have you left the Yakutat area to attend school or training classes?

A total of 42 percent of those interviewed in the Yakutat area had left Yakutat to attend school or training classes. Of those who had left, more were female than male and Indians outnumbered whites by more than two to one. These respondents tended to be among the younger age groups with more than half coming from the 15 to 34 age range. As a group these people did not believe that life would get better in the Yakutat area and were equally divided on whether or not Yakutat should grow. They also tended to be against major development in the wood products and oil and gas industry, and almost 70 percent were from within the city.

Persons who had not left the Yakutat area to attend school or training classes totaled 58 percent of those interviewed. Sixty-two percent of this group was non-Indian. As a group these people tended to be older and they were engaged in occupations requiring less formal education, particularly in the fishing and fish processing industry. They favored growth and were more optimistic, so it was not surprising that they were more agreeable to large-scale development. Proportionately, this group had greater representation from outside the city of Yakutat and tended to be more opposed to annexation than those who had left Yakutat to attend school or training classes.

74. If Yes, how many years did you spend away from the Yakutat area?

Of the 21 respondents who had left the Yakutat area, 28 percent were gone for less than one year. Fifty-two percent were gone from 1 to 6 years and 20 percent of the respondents were gone for more than 6 years. Although the sample distribution was small, those who had spent more than six years away tended to be more pessimistic and opposed to large-scale development. On the other hand, those who were away from school from 1 to 6 years tended to favor growth and conformed more closely to the overall pattern in regard to views of the future and of development.

75. The oil and gas industry is constantly in the news with the recent petroleum shortages, the resulting cost increases of petroleum products and accelerated exploration and development programs, so we all have some impressions of this industry. Do you have favorable, unfavorable or mixed impressions of the oil and gas industry?

The responses to this question indicated that 12 percent had favorable impressions of the oil and gas industry, 24 percent had unfavorable impressions, 54 percent had mixed impressions and 10 percent had no opinion. Although the unfavorable responses outnumbered the favorable responses by two to one, it is more significant that 54 percent of the respondents had mixed opinions and 10 percent had no opinion. Thus, almost two-thirds of the persons interviewed took no stand for or against this industry.

Although there were only 6 favorable responses, 4 were Indian. These people favored growth by five to one and were overwhelmingly in favor of large-scale development despite the fact that 4 of the 6 had occupations in the fisheries industry. In addition, this group was neither optimistic nor pessimistic about life in the future.

Those citing unfavorable impressions of the oil and gas industry were two to one Indian. This group had a high incidence of employment in the professional/technical/managerial, the clerical and the service industries. As a group, these people did not favor community growth or large-scale development, with over 90 percent wanting Yakutat's population to remain about the same. A large proportion of this grou were renters. They were especially pessimistic on race relations and were predominantly from within the city.

On the other hand, those with mixed opinions of the oil and gas industry were almost two to one white. They accounted for 75 percent of the professional/technical/managerial/ occupation group and, as could be expected, their incomes were in the upper ranges. They were reasonably optimistic about life getting better in the future, with the exception of future race relations about which they were pessimistic. However, while they favored growth by approximately two to one, most held mixed opinions of large-scale oil and gas industry development in the Yakutat area and tended not to favor larg scale oil and gas industry development.

76. Would your opinion of a reasonably large oil and gas industry operation in the Yakutat area be favorable, unfavorable or mixed?

When questioned specifically about their opinions of a reasonably large oil and gas industry operation in the Yakutat area, 24 percent of those surveyed were favorable, 36 percent were unfavorable, 36 percent held mixed opinions and 4 percent had no opinion on the subject. Questioning on the specific development resulted in a shift of 24 percent from the mixed and no opinion categories recorded

for the industry in general being between the favorable and unfavorable opinions, although the mixed and no opinion categories remained high.

Of those who favored this development, better than three to one were Indian and two-thirds were engaged in fisheries industry occupations. They also strongly favored growth, with 11 of the 12 persons wanting Yakutat to grow, and they were strongly in favor of a reasonably large wood products industry operation in Yakutat.

Those who had unfavorable opinions about this development included more females than males and more than twice as many Indians as non-Indians. This group also included all of the younger people interviewed in the 15 to 24 age range. In terms of occupation these people were well represented in the more highly skilled professional/technical/managerial, clerical and service areas. They were mostly renters and tended to be pessimistic both about life getting better in the future and future race relations. Furthermore, they were strongly in favor of Yakutat's population remaining about the same and strongly opposed large-scale wood products industry development in the Yakutat area.

Those holding mixed opinions on reasonably large-scale oil and gas industry operations in the Yakutat area were mostly whites. They tended to be optimistic about the future and wanted Yakutat to grow; they tended to be unfavorably disposed or had mixed opinions about a locally based, large-scale wood products industry.

77. Other than the local petroleum dealers, have you had any contact with people from the oil and gas industry?

Almost half (46 percent) said that they had had contact with people from the oil and gas industry. Males in this group outnumbered females by almost a two to one margin and whites outnumbered Indians. Yet, perhaps more significant was the fact that those who had had contact with the oil and gas industry opposed or had mixed reactions to a reasonably large-scale oil and gas operation in the Yakutat area by more than a four to one ratio although they favored community growth by almost a two to one margin. On the other hand, those havin no contact with people from the oil and gas industry were almost even ly divided over whether or not they wanted Yakutat to grow and were more divided in their opinions of a large-scale oil and gas development in the Yakutat area.

78. The Yakutat area has experienced logging and although it has been on a limited scale, most people have had the opportunity to observe this industry. Do you have favorable, unfavorable or mixed impressions of the logging industry?

The respondents' impressions of the logging industry were as follows: 26 percent were favorable, 36 percent were unfavorable, 26 percent held mixed opinions and 12 percent had no opinion. In contrast to opinions on the oil and gas industry, opinions on the logging industry were much more decisive, with more respondents being in favor and more people being opposed and substantially fewer holding mixed opinions.

Of those who were favorable to the logging industry, males outnumbered females and 10 of the 13 respondents were white. This racial breakdown was the reverse of that recorded by those who were generally favorable to the oil and gas industry. These people favored community growth by a small margin and also favored reasonably large-scale wood products and oil and gas industry operations in the Yakutat area. Finally, it is important to note that 9 of these 13 respondents lived outside the city of Yakutat.

Those who had unfavorable impressions of the logging industry were mostly male and included twice as many Indians as whites. They tended to be optimistic about life getting better, but preferred Yakutat's population to remain about the same. Therefore, they heavily opposed both large-scale wood products and oil and gas industry developments in the Yakutat area. This group had a greater than proportionate number of people from within the city and a majority were renters.

A majority of those who had mixed opinions about this industry favored community growth although they tended to be opposed to specific wood products and oil and gas industry development. However, most expressed mixed opinions of these developments. It is also noteworthy that 10 of these 13 respondents were from within the city of Yakutat.

79. Would your opinion of a reasonably large-scale forest products industry operation in the Yakutat area be favorable, unfavorable or mixed?

The most significant factor here was the shift from mixed to no opinion about the industry in general to unfavorable opinions of the industry being in the Yakutat area. When people were interviewed as to their impressions of the logging industry generally (question 78), 36 percent expressed unfavorable opinions. However, in question 79 when a specific development was cited, unfavorable opinions rose to 46 percent of those surveyed. This shift to an unfavorable opinion was shared almost equally between Indians and whites and between those inside and outside the city.

80. Have you had any contact with the logging or forest products industry?

Sixty-four percent of those interviewed in the Yakutat area claimed to have had contact with the logging or forest products industry with males outnumbering females by almost two to one in this instance. As with the oil and gas industry, those who did have contact proved to be highly unfavorable towards a large-scale wood products industry development in the Yakutat area. On the other hand, those who claimed to have had no contact were evenly divided on this subject.

81. The U.S. Department of the Interior is investigating the possibility of leasing outer continental shelf lands in the Gulf of Alaska for oil and gas exploration and development. Have you heard of this?

Eighty percent of those surveyed had heard that outer continental shelf lands in the Gulf of Alaska might be leased for oil and gas exploration and development. On the other hand, 14 percent had not heard of this proposed activity and 6 percent were not sure. All of those who either did not know or were not sure if they had heard of these possible oil and gas exploration and development activities were Indian and 90 percent were from within the city of Yakutat.

82. If Yes, what have you heard?

Of the 40 respondents who had heard that outer continental shelf lands in the Gulf of Alaska might be leased for oil and gas exploration and development, approximately 28 percent thought that exploration drilling was imminent. Twenty percent expressed the opinion that the oil companies would be moving into the Yakutat area, 10 percent believed the oil companies wanted offshore lands, 8 percent more or less repeated what had been told them in question 81 and the same percentage had heard about local land purchases by the oil companies. In addition, 28 percent expressed a wide variety of other views.

83. If this takes place, there may be large facilities such as a gas liquefaction plant in Yakutat. Do you think this is a good or bad thing?

The responses to the question showed that 32 percent believed a large facility such as a gas liquefaction plant in Yakutat would be good but that 40 percent believed it would be bad and 28 percent had no opinion.

It is significant here that as questions proceeded from general opinions of the oil and gas industry to specific opinions of development by this industry in the Yakutat area to the development of a specific type of plant in the Yakutat area, there continued to be a greater redistribution of those with mixed opinions or no opinions

to favorable or unfavorable opinions, or good or bad opinions. As the development became more specific those favoring development increased at a greater rate than those opposed to development although in absolute terms those opposed outnumbered those favoring reasonably large-scale development in the oil and gas industry. The no opinion group was still high in this case accounting for 28 percent of those responding to this question.

Those who favored this type of development were primarily white and were more than two to one in favor of growth while, at the same time, strongly opposed to annexation. They were largely homeowners and were for reasonably large-scale wood products and oil and gas industry development in the Yakutat area. This group consisted of a more than proportionate amount of respondents from outside the city of Yakutat.

Those who believed that such large facilities would be detrimental were 60 percent female and approximately 70 percent Indian. They were in large part renters and did not wish to see Yakutat grow. Furthermore, they tended to be pessimistic about the future and they were definitely opposed to large-scale wood products and oil and gas industry development in the Yakutat area. This group also contained a proportionately greater number of people from within the city of Yakutat.

There was no significant difference between males and females or whites and Indians for those who had no opinion on this issue. They were, however, extremely optimistic that life would get better in the future and they wanted Yakutat to grow. Although offering no opinion on this particular question, they tended to favor large-scale oil and gas industry development in the Yakutat area although the majority had mixed opinions.

84. <u>If Good, why do you think this will be good</u>?

Almost two-thirds (62 percent) of those responding thought that a large facility such as a gas liquefaction plant in the Yakutat area would be a good thing because it would offer employment opportunities while 25 percent thought it would benefit the community. Of the remaining 2 respondents, 1 thought it was necessary to the nation's welfare and the other thought it would bring professional services to Yakutat.

85. <u>If Bad, why do you think this will be bad?</u>

The principal reason given by those who believed large-scale facilities such as a gas liquefaction plant to be bad was related to environmental disruption in over half of the responses and increased population in the Yakutat area in approximately one-third of the responses. Environmental disruption was exclusively an

Indian response, while increased population was predominantly a white response. It is also noteworthy that those citing environmental disruption were in complete support of annexation. Finally, all 6 respondents who cited increased population opposed community growth.

86. Do you think the city of Yakutat is prepared to handle large onshore development as a result of offshore oil and gas exploration and development?

Eighty-five percent of those responding directly to this question by either answering "yes" or "no" did not think that the city of Yakutat was prepared to handle large onshore developments which might result from offshore oil and gas exploration and development activities.

Those who believed that the city could handle this development were predominantly Indian and predominantly in the lower middle income group. They were all homeowners and they were reasonably optimistic about life getting better. As a group they wanted Yakutat to grow and, therefore, favored large-scale development. All 6 of these respondents were from within the city of Yakutat.

87. Do you favor the city of Yakutat's annexing land so that new development can be controlled better?

Unfortunately, this is a somewhat loaded question in that it assumes better control of the land with annexation. Although this is a reasonable expectation, it is not a certainty. Nevertheless, 80 percent of those responding directly to the question were in favor of annexation. Those favoring annexation were essentially homeowners who were reasonably optimistic about the future and wanted Yakutat to grow. However, they did have reservations about large-scale development.

Those opposing annexation contained a large proportion of renters. This group was not optimistic about life in the future and tended to prefer that Yakutat's population remain the same rather than grow.

In regard to those persons interviewed within the city of Yakutat, 86 percent said they would like to see Yakutat annex land so that new development could be better controlled. Outside the city, 71 percent favored annexation.

88. If No, why?

Although the number who answered "no" to question 87 was reasonably small, this group served to point out some real or imagined problems in the Yakutat area through its negative responses on

annexation. The principal objection to annexation was the availability of land. Of secondary concern was the ability of the city of Yakutat to manage annexed lands well.

89. How do you think the residents of the Yakutat area could best fit into possible oil and gas development?

Of those who answered this question directly, 60 percent saw employment as the best way that residents of the Yakutat area could fit into possible oil and gas industry development. This group, which was composed of a greater number of males and whites, tended to want Yakutat to remain the same rather than grow. They also tended to be mixed on large-scale wood products and oil and gas industry development.

The other responses which included cooperation with the industry, business opportunity and increased community control, as a group tended to be in favor of growth in the Yakutat area. However, these people were opposed to large-scale wood products and oil and gas industry development.

90. How many persons in this household were gainfully employed during 1974?

Forty-four percent of the households surveyed had 1 person gainfully employed during 1974 and 40 percent had 2 persons employed. Only 8 percent had 3 persons employed, 4 percent had 4 employed and 2 percent had more than 4 employed. In addition, one household (representing 2 percent of those surveyed) had no employed at the time of the survey.

Households with 1 person employed tended to include a larger share of those interviewed who were in the younger age groups. This group was highly optimistic and in favor of growth in the Yakutat area. However, it also appeared to be the most unfavorable to large-scale wood products and oil and gas industry development.

91. What was the total cash income received by all members of this household during 1974, from wages, social security, welfare unemployment compensation or any other source except Alaska Native Claims Settlement funds?

According to the U.S. Census, the median 1969 earnings of all families and unrelated individuals in the Skagway/Yakutat Census District was $10,358. Factors such as inflation have undoubtedly played a major part in increased incomes, and household income statistics are not directly comparable to those for families and and unrelated individuals. Nevertheless, it is obvious from an inspection of the grouped data on household incomes that incomes

have increased in the Yakutat area if this was a representative sample.

Only 30 percent of the households surveyed reported an annual income of less than $10,000 and more than half of this group received between $7,500 and $9,999. On the other hand, more than half (54 percent) of the households surveyed reported annual incomes of $15,000 or more. Forty-four percent of this second group was made up of households with annual incomes of between $15,000 and $19,999; 20 percent received between $20,000 and $24,999; 4 percent between $25,000 and $29,999; and 6 percent reported an annual income of $30,000 or more.

The most distinctive income group was made up of persons from households earning between $7,500 and $9,999 per year. This group represented 16 percent of the persons interviewed with 5 of the 8 respondents being Indian. It was highly optimistic about life in the future and was evenly divided on future race relations in contrast to the highly negative opinions on future race relations expressed by most other income groups. This group was also highly in favor of community growth and was the only income group which favored large-scale wood products and large-scale oil and gas industry development in the Yakutat area. Of its 8 members, 7 were from within the city of Yakutat.

It is also noteworthy that heavy opposition to large-scale development tended to come from the lower income groups with household incomes of less than $7,500 per year and the wealthiest groups with annual household incomes of $25,000 or more. These people were predominantly from within the city of Yakutat.

The remaining households, i.e. those with an income of between $10,000 and $24,999 in 1974, were evenly split on the growth and development questions although they tended to be highly pessimistic. There was a greater proportionate representation by persons from outside the city in this group.

92. About how much money did all members of this household get from Alaska Native Claims Settlement funds in 1974?

A total of 60 percent of the households surveyed, or households of 30 respondents, contained at least one person eligible to receive settlement funds. Of these, 1 respondent claimed to have received no settlement funds despite being eligible to do so. The remainder claimed to have received the following: approximately 7 percent between $1 and $100; 13 percent between $101 and $250; 27 percent between $251 and $500; 10 percent between $501 and $750; 13 percent between $751 and $900; 10 percent between $901 and $1,150; 3 percent between $1,151 and $1,400; and 7 percent over $1,500.

Since Alaska Native Claims Settlement funds are not officially considered to be income, it is obvious that these funds contributed substantially to the disposable incomes of many residents of the Yakutat area in 1974.

93. About how much do you spend each month on fuel for cooking and heating in this house?

Of the persons who answered this question and whose fuel costs were not included in their rent, 34 percent paid in excess of $100 per month, 29 percent paid between $76 and $100 and 37 percent paid $75 or less per month on fuel for cooking and heating purposes. At the high end of the scale, 10 percent of those who answered this question spent over $200 per month on fuel.

94. About how much do you spend each month on electricity?

Excluding those whose electricity costs were included in their rent and those who did not answer the question, almost two-thirds (64 percent) of the people surveyed paid $50 or less per month for electricity with 17 out of the 23 respondents in this group paying between $26 and $50 per month. At the extreme, 11 percent claimed to spend in excess of $200 per month for electricity.

95. About how much do you spend each month for other utilities such as sewer and water services and garbage and trash collection?

Besides those who had had the cost of these services included in their rent, provided them themselves or did not answer this question, 64 percent paid between $11 and $20 per month while 12 percent paid less than $10 per month, 12 percent paid $21 to $30 per month and 12 percent claimed to pay over $30 per month.

96. If you own your own house, about how much do you spend each year on property taxes?

Since the area outside the city of Yakutat is not subject to property tax, the 18 respondents outside the city were not asked this question. Of the remaining 32 respondents, 11 were renters, 1 lived rent free in a relative's house, but had not assumed the property tax on it and 8 did not know how much property tax they had paid.

Consequently, only 12 respondents directly answered this question. Two-thirds, or 8 of this group, paid less than $100 a year; 13 percent (or 1 respondent) paid between $101 and $200 per year; and 25 percent (or 3 respondents) claimed to pay more than $200 in property taxes per year.

Also of significance is that 7 of the 9 respondents who opposed annexation by the city of Yakutat did not pay property taxes at the time of the survey.

97. If you own you own house, about how much do you spend each year on its maintenance?

A total of 23 of the 50 persons surveyed did not own their own houses. Of the remaining 27 respondents, 10 did not answer the question. Thus, only 17 persons provided actual maintenance cost figures. Thus, annual maintenance costs were estimated at between $1 and $200 by 35 percent (or 6 respondents); between $201 and $400 by 24 percent (or 4 respondents); between $401 and $600 by 6 percent (or 1 respondent); and over $600 by 35 percent (or 6 respondents).

98. About how much money does your household need to live on in an average year?

At the low extreme, 8 percent (or 3 respondents) all of whom were Indian, thought their households needed only $5,000 or less per year to live on whereas, at the other extreme, 14 percent (or 5 respondents), all of whom were white, thought their households would require more than $15,000 per year. However, most people surveyed thought their households could get by on something less than their current household incomes except for those in the lower income ranges. Approximately 19 percent claimed their households needed more income to live on than they earned; 16 percent believed that their households needed about the same income to live on as was earned; and 65 percent thought their households could get by on less income than had been received in 1974.

99. Do you have a savings account at a bank?

Despite the fact that there was no bank in Yakutat at the time of the survey, 70 percent of those interviewed had savings accounts. All persons engaged in clerical occupations had savings accounts as did all but 2 white respondents and, as might be expected, almost all persons in the higher income brackets.

100. Do you own any stocks or bonds?

Twenty-eight percent of the persons interviewed in the Yakutat area owned stocks or bonds. This group included more whites than Indians and had incomes centered in the higher ranges. It was generally pessimistic and opposed to growth and large-scale development in the Yakutat area.

101. Do you own any commercial property or assets?

Of those interviewed, 52 percent owned commercial property or assets. In this group, males outnumbered females and whites outnumbered Indians while a major share were engaged in fisheries-related occupations. Not surprisingly, most owners of commercial property or assets had household incomes in the upper ranges. They were optimistic and wanted Yakutat to grow. Also, although somewhat opposed to large-scale wood products industry development, they tended to favor large-scale oil and gas industry development.

102. Do you have a life insurance policy?

Half of the persons interviewed in the Yakutat area had life insurance policies. However, more than two-thirds of this group was white and slightly more than half lived outside the city of Yakutat. Policy holders tended to be concentrated in the younger age ranges and most came from higher income households. This group wanted Yakutat to grow although it tended to be against large-scale development and was extremely pessimistic about life getting better in the future.

103. If you had savings to invest, where would you invest this money?

Only 30 persons responded to this question. Two-thirds of those people indicated they would invest locally, principally in land, but also in other local businesses. One-third thought they would invest outside the local area.

Of the 16 persons who would have invested locally in land, 13 were white. On the other hand, 3 of the 4 persons who would have invested in local businesses were Indian.

104. Do you own a radio?

Almost 90 percent of those interviewed who answered this question owned a radio. Of the 5 persons who did not own a radio, 4 were Indian and 4 lived in the city of Yakutat.

105. If Yes, about how many hours do you have the radio on each day?

Of those who answered this question, 62 percent said they had their radios on for 3 hours or less each day, 23 percent had them on for 4 to 6 hours each day, and the remaining 3 percent had their sets on for more than 6 hours a day. Since Yakutat does not have television, it is assumed that much of the community's information is obtained from radio stations which can be picked up locally as 69 percent of the respondents had their radios on on a daily basis.

106. When was the last time you or a member of this household saw a movie?

It is obvious that movies are a popular form of entertainment in the Yakutat area as 50 percent of those answering this question or a member of their households had seen a movie in the last 3 days and 93 percent had seen one within the last month.

107. How many times a month do you and other members of this household see a movie?

Eighty-four percent of the persons answering this question or members of their households normally went to the movies at least once each month. Over half of this movie-going group went 1 to 5 times a month; however, over 10 percent of those households went to the movies a staggering 15 times or more.

108. When was the last time someone in this household read a newspaper or a magazine?

Approximately 94 percent of all persons interviewed who answered this question had read a newspaper or a magazine within the last 3 days, including all those who lived outside the city of Yakutat.

109. Please tell me whether the people in this house have taken part in motorcycling often, sometimes or never.

A surprisingly high 46 percent of the households surveyed included at least one person who went motorcycling although only 12 percent did so frequently. Participation in this recreation activity was proportionately higher for white households and for those living outside the city.

110. Please tell me whether the people in this house have taken part in downhill skiing often, sometimes or never.

Only 14 percent of the households surveyed had members who went downhill skiing, with a mere 2 percent doing so often. Of the 7 households which included downhill skiers, 5 were white and 5 lived outside the city.

111. Please tell me whether the people in this house take part in cross-country skiing often, sometimes or never.

Cross-country skiing was an activity in which more than half, or 52 percent, of the households interviewed participated, although only 12 percent did so often. Again, this recreation activity was more popular with whites and was relatively more popular with households outside the city limits.

112. Please tell me whether the people in this house take part in walking for pleasure often, sometimes or never.

Walking ranked fourth in popularity among the spare time activities listed in the Yakutat survey. Only 5 persons including 4 city residents and 3 Indians, claimed that no one in their households ever walked for pleasure.

113. Please tell me whether the people in this house take part in basketball often, sometimes or never.

Members of 72 percent of the households interviewed played basketball, with 32 percent playing often. Basketball was one of the few activities in which participation by Indian households was higher than that by whites.

114. Please tell me whether the people in this house take part in snowmobile driving often, sometimes or never.

Sixty percent of those interviewed said a member of their household drove a snowmobile for pleasure with 28 percent doing so often. Participation in this recreation activity by Indian households was slightly below that by white households, and a much larger proportion of non-participants came from within the city of Yakutat.

115. Please tell me whether the people in this house take part in hunting often, sometimes or never.

All but 10 persons interviewed said that at least someone in their households hunted with 34 percent of the households having people who went hunting often and 46 percent having people who sometimes did so. White households claimed to hunt often more than did Indian households although a majority of respondents of both races went hunting at least occasionally. Nevertheless, 9 of the 10 households whose members never hunted were Indian and were in the city of Yakutat.

116. Please tell me whether the people in this house take part in fishing often, sometimes or never.

Fishing was the leisure time activity with the widest participation by Yakutat households surveyed. Fully 96 percent of the households included people who fished with 64 percent doing so often. Only 2 respondents said that no one in their households ever fished.

117. Please tell me whether the people in this house take part in ice fishing often, sometimes or never.

Only 22 percent of the households surveyed in the Yakutat area had members who went ice fishing with a mere 6 percent doing so frequently.

118. Please tell me whether the people in this house take part in picnicking often, sometimes or never.

Members of all but 6 households surveyed indicated that they went picnicking with 38 percent doing so often and 50 percent saying it was something family members did occasionally. Picnicking was an important spare time activity to people of both races in Yakutat although 5 of the 6 households which never went picnicking were Indian.

119. Please tell me whether the people in this house go visiting friends or relations often, sometimes or never.

This was an activity in which all except 7 respondents interviewed said people from their households participated. Fifty percent claimed their household members visited friends and relatives often and 36 percent claimed they did so sometimes. All 7 households whose members did not visit friends or relations were Indian and 6 lived within the city of Yakutat.

120. Please tell me whether the people in this house sew often, sometimes or never.

Sewing was also a popular spare time activity in the Yakutat area. Eighty-six percent of the respondents said that someone in their households sewed, with 46 percent having people who did so often. A majority of those who often sewed were Indian. On the other hand, 4 of the 7 households with members who never sewed were white and 4 lived outside the city.

121. Please tell me whether the people in this house carve often, sometimes or never.

No one carved in 62 percent of the households surveyed. This was true for 73 percent of the Indian households and 52 percent of the white households. Only 4 households included people who often carved.

122. Please tell me whether the people in this house undertake carpentry work often, sometimes or never.

In 72 percent of the households surveyed, at least one member did some carpentry work, with 30 percent of the respondents listing this as an activity which household members did often. A much higher proportion of white households (approximately 91 percent) said that household members did at least some carpentry work than did Indian

households (54 percent). Also, 12 of the 14 households where no one did carpentry work were Indian and 11 of these same households were located within the city of Yakutat.

123. Please tell me whether the people in this house undertake other arts and crafts work often, sometimes or never.

The distribution of responses to this question was almost identical to that for carpentry. Seventy-two percent of the households surveyed had at least one member who was involved in other arts and crafts, with 26 percent having members who often took part in such activities. Here too, the non-participants are significant. Eleven of the 14 households whose members never took part in other arts and crafts were Indian and 10 were from within the city.

124. Please tell me whether the people in this house listen to records or tapes often, sometimes or never.

All but 3 persons surveyed said that members of their households listened to records or tapes, with 76 percent often doing so. Listening to records or tapes often was more frequently cited by Indian households (81 percent) than by white households (74 percent).

125. Please tell me whether the people in this house take part in skating often, sometimes or never.

Although someone from 64 percent of the households surveyed sometimes skated, only 1 household claimed a member who did so frequently. Of the households with no skaters, Indians outnumbered whites by more than two to one, and more than 75 percent of these households were located within Yakutat's city limits.

126. Please tell me whether the people in this house take part in dancing often, sometimes or never.

Dancing was listed as an occasional spare time activity by a majority of households surveyed (54 percent), with an additional 26 percent listing this as an activity in which household members often participated. Dancing was a leisure time activity which involved greater participation by Indian household members than whites and a higher non-participation rate by households outside of the city of Yakutat than those in town.

127. Please tell me whether the people in this house go boating often, sometimes or never.

Boating was the third most popular of all of the spare time activities listed in the Yakutat survey with all but 4 persons interviewed indicating that household members engaged in this activity.

At least one member of 38 percent of the households often went boating and 54 percent did so occasionally. All 4 non-participating households were Indian, with 3 being located within the city of Yakutat.

128. Please tell me whether the people in this house drink often, sometimes or never.

Sixty percent of the people interviewed said household members sometimes drank, with only 22 percent saying drinking was something they did often. Although more Indian households considered that their members drank more often than did whites, there was no significant difference between the two races on this subject.

129. Please tell me whether the people in this house smoke often, sometimes or never.

Most households surveyed (52 percent) had at least 1 heavy smoker. This was more true of Indian households of which 65 percent included heavy smokers compared with 39 percent of white households. Fifty-six percent of the white households had no smokers at all and there were more non-smoking households outside the city of Yakutat.

130. Please tell me whether the people in this house engage in other leisure time activities in addition to those activities specifically mentioned in the foregoing questions.

Two other important spare time activities were mentioned in response to this question. They were reading and playing pool.

131. In terms of percent based upon estimated dollar value, what percentage of your food does your household obtain from subsistence hunting, fishing, berry picking and similar activities?

Yakutat residents proved to be heavily dependent on subsistence activities as a source of food as a mere 10 percent of those interviewed said that their households obtained no food from subsistence sources, although 34 percent said that they took only a very small amount. Thirty percent estimated that, in terms of value, about one-quarter of their households' food came from subsistence activities, with 16 percent claiming one-half and 10 percent claiming that fully three-quarters of the value of their households' food came from subsistence sources.

Of the 5 households surveyed which did not obtain food from subsistence sources, 4 were white. On the other hand, a greater proportion of Indian households took only a very small amount of subsistence food. Although this second group had a broad range of household incomes, household sizes were small with 14 of the 17 households in this category having 3 or less members.

The 23 households which obtained 25 to 50 percent of the value of their food from subsistence were predominantly native. These same households tended to have incomes in the lower middle ranges and to be large in size, with 17 having 4 or more members.

All 5 households which obtained 75 percent of their food from subsistence activities were white and had 1974 incomes in excess of $15,000. Four of the 5 households in this group had 5 or more members and 4 were located outside the city of Yakutat. This group favored annexation and wanted Yakutat to grow, but had totally mixed opinions of large-scale industry development in the Yakutat area.

132. The tradition of the Indian people in the past has little or no place in today's life. Please tell me if this statement is very true, somewhat true or untrue.

The tradition of the Indian people in the past had a place in today's life according to 68 percent of the respondents and somewhat less of a place to 16 percent of those interviewed. Only 10 percent totally discounted Indian traditions.

There was a marked difference between Indian and white responses on this subject. Whereas 91 percent of whites interviewed believed that past Indian traditions were important in today's life, barely 50 percent of the Indians held this opinion. Furthermore, 10 of the 13 people who thought that past traditions were unimportant or of limited importance were Indian.

The group of 5 people who totally discounted past Indian traditions included 4 Indians, wanted Yakutat to grow and tended to favor large-scale wood products and oil and gas industry development.

133. Change occurs too fast here. Please tell me if this statement is very true, somewhat true, or untrue.

Sixty-four percent of those interviewed disagreed that change occurred too fast in the Yakutat area. However, 12 percent believed this to be very true and 20 percent believed it to be partly true.

134. People are getting more and more interested in money. Please tell me whether this statement is very true, somewhat true or untrue.

Eighty percent of the respondents strongly believed that people were getting more and more interested in money, with an additional 16 percent believing this to be at least partly true. Only 1 person interviewed totally disagreed with this statement and 1 other person had no opinion on the subject.

135. It is important to find a special line of work in order to succeed. Please tell me whether this statement is very true, somewhat true or untrue.

Seventy-two percent of those interviewed thought that finding a special line of work was at least somewhat important to success, with 54 percent believing it to be very important. Twenty percent believed this statement to be untrue and 8 percent had no opinion on the subject.

Seven of the 10 respondents who believed that a special line of work was not essential to success were white and 5 were engaged in professional/technical/managerial occupations. These people had incomes in the middle to upper ranges and had better than an average education. They tended to view large-scale wood products and oil and gas development unfavorably and 7 came from outside the city of Yakutat.

136. The key to success is education. Please tell me whether this statement is very true, somewhat true or untrue.

Seventy-two percent of the persons interviewed in the Yakutat area believed that education was the key to success, with an additional 14 percent believing this to be at least partly true. Four percent of the respondents had no opinion on the subject and only 10 percent believed that education was unrelated to success.

The five persons who believed that education was not essential to success included 4 renters and 4 from within the city of Yakutat. This group also accounted for 2 of the 3 people interviewed who were less than 25 years old. Conversely, all 6 persons surveyed with less than a 9th grade education believed that education was a critical element in success.

137. Pride in the old ways has disappeared. Please tell me whether this statement is true, somewhat true or untrue.

Sixty-two percent of the respondents believed that pride in the old ways had disappeared at least to some extent, with 30 percent in disagreement with this statement and 8 percent expressing no opinion one way or the other. Two-thirds of the group which thought that pride in the old ways still existed were Indian and more than two-thirds were from the city of Yakutat. In addition, 12 of the 15 respondents in this category favored annexation.

138. The division of the Tlingit nation into Eagles and Ravens is no longer important in the way Tlingits marry or relate to each other. Please tell me whether this statement is very true, somewhat true or untrue.

Forty-eight percent of those interviewed believed that the division of the Tlingit nation into Ravens and Eagles was at best of only minor importance in the way Tlingits married or related to each other. However, 30 percent disagreed with this assertion and 22 percent did not know whether it was true or not.

Of the 15 persons who believed that this division was still important, 11 were Indian and 11 lived in the city of Yakutat. Furthermore, 14 favored annexation by the city of Yakutat. On the other hand, 8 of the 11 persons who were not sure whether or not the division of the Tlingit nation into Eagles and Ravens was still important were white.

139. Family life has deteriorated in Yakutat because family members now leave the community for long periods for education and jobs, and only some come back. Please tell me whether this is very true, somewhat true or untrue.

Slightly over one-half of the respondents thought that there was some truth to this statement, with 22 percent feeling very strongly about it and 32 percent thinking it was at least partly true. Ten percent did not know whether or not family life in Yakutat had deteriorated because family members had left the community for long periods and 36 percent disagreed with this statement.

Of the 18 persons who disagreed, 11 were Indian and 14 lived within the city of Yakutat. In addition, 15 of these people favored annexation.

140. The world outside Yakutat is far more attractive, interesting and exciting than the community of Yakutat. Please tell me whether this statement is very true, somewhat true or untrue.

This statement was viewed as untrue by 54 percent of the persons interviewed. Ten percent had no opinion on the subject, but 36 percent thought the outside world was at least somewhat more attractive, interesting and exciting than Yakutat.

Although the 13 people who believed the outside world was much more alluring than Yakutat were fairly evenly divided along racial lines, this group was mostly made up of renters and a majority lived outside the city of Yakutat. In addition, these people favored community growth although they opposed large-scale wood products development and were divided over oil and gas industry development.

It is also noteworthy that 4 of the 5 persons with no opinion on this subject were Indian and all came from within the city of Yakutat

141. There's never enough time to get all the things done that have to be done. Please tell me whether this statement is very true, somewhat true or untrue.

Sixty-eight percent of the persons interviewed considered the statement to be very true, with an additional 14 percent thinking that it was somewhat true. Only 12 percent disagreed that there was never enough time to do all the things that had to be done and 6 percent had no opinion on the subject.

Although the group which disagreed with this statement numbered only 6 persons, it is nevertheless significant that 5 were Indian and all lived within the city of Yakutat.

142. Each person has the ability to make a life exactly the way he wishes. Please tell me whether this statement is very true, somewhat true or untrue.

A surprisingly high 80 percent of the respondents in the Yakutat area believed that they had complete control over their own destinies with an additional 12 percent believing this to be at least partly true. Only 1 person interviewed thought that this statement was untrue and 3 people were undecided.

143. As people become more competitive, they also lose the ability to get along with others. Please tell me whether this statement is very true, somewhat true, or untrue.

The view that people lose the ability to get along with each other as they become more competitive was strongly held by 42 percent of those interviewed and less strongly by an additional 20 percent. Thirty percent believed that competitiveness was unrelated to people's ability to get along with others and 8 percent ventured no opinion on the subject.

Of the 15 persons who believed this statement to be untrue, 9 were white, 8 lived outside the city of Yakutat and 10 had household incomes in excess of $15,000 per year. On the other hand, of the 21 persons who strongly agreed that people lost the ability to get along with each other as they became more competitive, 9 were Indian and 14 lived in the city of Yakutat. Eleven of this latter group also believed that race relations would deteriorate in the future although 10 believed that life in general would get better.

144. People are happier today than they were in the past. Please tell me whether this statement is very true, somewhat true or untrue.

Two-thirds of those interviewed disagreed with the statement that people are happier today than they were in the past. Only 10

percent thought this statement was very true, with 6 percent considering it to be somewhat true and 8 percent undecided on the subject.

Of the 33 respondents who disagreed, almost two-thirds were female and a majority were white. Conversely, of the 8 respondents who believed that people were at least somewhat happier today, 6 were Indian.

145. Life has generally gotten better during the last five years. Please tell me whether this statement is very true, somewhat true or untrue.

Answers on this subject were fairly evenly divided, with 46 percent indicating that life had gotten better during the last five years at least to some extent, 40 percent indicating that life had not improved and 14 percent expressing no opinion on the subject.

Of the 30 percent who strongly believed that life had generally gotten better, opinion between the sexes, the races and those living inside and outside the city of Yakutat was fairly evenly divided. However, two-thirds of the fishermen interviewed agreed with this statement. As a group, these people also strongly favored annexation, tended to come from larger sized households, were optimistic about the future and wanted Yakutat to grow, although they were not favorable to either a large-scale wood products or an oil and gas industry in the area.

The 40 percent of those surveyed who believed that life had not gotten better during the past five years tended to be less favorable to annexation, included slightly more whites than Indians and accounted for half of the persons in professional/technical/managerial occupations. These people were overwhelmingly pessimistic about life in the future and over the state of race relations in the Yakutat area.

146. Life will generally get better during the next five years. Please tell me whether this statement is very true, somewhat true or untrue.

The largest proportion of respondents (32 percent) did not express an opinion over whether or not life would generally get better during the next five years. However, 24 percent strongly believed that life would improve and an additional 14 percent thought it would get at least a little better. The remaining 30 percent tended to be more pessimistic about the future.

The group that believed that life would improve at least a little included two-thirds of the fishermen interviewed. These people

tended to want Yakutat to grow but were slightly opposed to large-scale development.

Of those who were pessimistic about life in the future, two-thirds were white and a slight majority lived outside the city of Yakutat. These people also tended to want Yakutat to grow but were not favorable to large-scale development. Persons engaged in clerical and sales and in service occupations were relatively heavily represented in this more pessimistic group.

Finally, of the 16 persons who would not speculate about the future, 11 were Indian and 15 lived within the city of Yakutat. This group tended to want Yakutat's population to remain about the same, but to believe that race relations would neither improve nor deteriorate as a result of population growth.

147. The young people will have more opportunity for a better life if they leave Yakutat. Please tell me whether this question is very true, somewhat true or untrue.

Rather surprisingly, 56 percent of the people interviewed thought that the young people would have more of an opportunity for a better life if they left Yakutat. Thirty percent thought this statement to be very true, with 26 percent thinking it was at least partly true. Only 34 percent considered the statement to be untrue and 14 percent had no opinion on the subject.

Of the 15 persons who strongly believed that young people would have better opportunities in life if they left Yakutat, two-thirds were Indian and a majority were renters and residents of the area outside the city. Conversely, those who disagreed on this subject were predominantly white.

148. Family ties in Yakutat are as strong as in the past. Please tell me whether this statement is very true, somewhat true or untrue.

Almost half (48 percent) of those interviewed in the Yakutat area thought that family ties were still strong, with 34 percent totally agreeing that they were as strong today as they had been in the past and 14 percent in partial agreement. However, 36 percent believed this to be no longer true and 16 percent did not know if it was true or not.

Of those who thought that this statement had at least some degree of truth, approximately 60 percent were Indian. They were strongly in favor of community growth although somewhat divided as to the merits of large-scale development in the Yakutat area.

On the other hand, those who believed that family ties in the Yakutat area were no longer as strong as in the past were evenly divided in

terms of sex and race. However, this group contained a relatively high proportion of renters and tended to be pessimistic about the future. Furthermore, while these people narrowly favored community growth, they generally had unfavorable or mixed reactions to large-scale development in the Yakutat area.

149. The teaching of Tlingit in the Yakutat schools is essential to maintain or enhance the Yakutat culture. Please tell me whether this statement is very true, somewhat true or untrue.

Almost three-quarters of the persons surveyed (74 percent) thought that the teaching of Tlingit in the Yakutat school system was essential to maintain or enhance the culture of this area. An additional 12 percent thought that this was somewhat true. Only 4 percent, or 2 respondents, totally disagreed with this statement.

150. Please tell me whether you would consider the following improvements or additions to the community very important, important or unimportant.

A practicing doctor.

All persons interviewed considered the presence of a resident physician in Yakutat to be important, with 82 percent considering it to be very important. The presence of a practicing doctor in the community also appeared to be a little more important to women than it did to men.

151. A practicing dentist.

The presence of a practicing dentist in the Yakutat area was important to all but 1 person interviewed. However, the presence of a locally based dentist was judged very important by a lower proportion of respondents (72 percent) than had given this degree of importance to the presence of a locally based doctor. Of those who considered a practicing dentist in Yakutat to be very important, 60 percent were female and 60 percent were Indian.

152. A hospital.

The addition of a hospital in Yakutat was considered important by 90 percent of the people surveyed, with 64 percent believing such a facility to be very important. Only 5 persons indicated that they thought a hospital in the community was unimportant. All of these people were white and 4 were males.

153. A swimming pool.

A local swimming pool was considered to be important by 78 percent of the respondents, with 44 percent believing the addition of such

a facility to be very important. Eleven persons, or 22 percent of those surveyed, considered a swimming pool to be unimportant.

Of those who believed the addition of a swimming pool to be very important, over two-thirds were male and almost as great a percentage were in favor of community growth. It is significant that 8 of the 9 fishermen interviewed were strongly in favor of a swimming pool in the community.

Of those who viewed a swimming pool as unimportant, whites narrowly outnumbered Indians and these people were also more than proportionately opposed to annexation.

154. A large general merchandise store.

A large general merchandise store was considered of importance to 84 percent of those surveyed, with almost half (48 percent) considering such a facility to be very important and only 16 percent viewing it as unimportant.

Somewhat surprisingly, males tended to place a higher degree of importance on such a store than females and those who considered it to be very important also included a relatively high proportion of Indians and residents from outside the city. (Seven of the 8 persons surveyed who viewed this type of store as unimportant came from the city of Yakutat). Finally, as with other questions in this survey dealing with desired additions or improvements to the community, persons who rated a large general merchandise store as very important tended to want Yakutat's population to grow.

155. A community college.

Sixty-two percent of those surveyed indicated that a community college in the Yakutat area was at least of some importance, although only 26 percent believed that such an addition to the community would be very important to them. Furthermore, a substantial 38 percent considered a local community college facility to be unimportant.

Indians and whites held sharply different views about the importance of a local community college. Seventy-three percent of the Indians interviewed thought such a facility had at least some importance compared with only 48 percent of the whites. Also, 10 of the 13 persons who considered the addition of a community college to be very important were Indian. Those strongly in favor also firmly supported community growth and tended to support large-scale wood products and oil and gas industry development in the Yakutat area.

156. A beauty and/or barber shop.

A beauty and/or barber shop in Yakutat was seen as being of at least some importance to all but 7 persons surveyed. Thirty-six percent considered these amenities to be very important and 50 percent believed them to be important.

Two-thirds of the group which considered a local beauty and/or barber shop to be very important were Indian and the same proportion favored community growth. However, while these people were relatively favorable to large-scale oil and gas industry development in the Yakutat area, they opposed large-scale wood products development.

On the other hand, the chief distinguishing characteristic of those who were not interested in a local hairdressing establishment was that they were mostly male.

157. A hardware and building supply business.

Fully 88 percent of those surveyed believed a local hardware and building supply business would be at least an important addition to the community, although most (56 percent) considered this to be an important addition rather than a very important one (32 percent).

Almost two-thirds of those who believed that this type of business would be a very important addition to the community were Indian and the same proportion were male. This group was divided on the question of community growth although it tended to be relatively favorable to large-scale wood products and oil and gas industry development in the Yakutat area.

158. A drugstore.

Again, 88 percent of those surveyed believed a drugstore would be at least an important addition to the community although a larger proportion (62 percent) believed this amenity to be important than very important (26 percent). Of those who rated a drugstore as very important, Indians outnumbered whites by better than a two to one margin. However, of the 6 persons who viewed such a community addition as unimportant, 4 were white.

159. A bank.

Except for amenities in the health area (doctor, dentist, hospital), the addition of a bank in the community was seen to be very important by a greater number of those surveyed than any other amenity listed in the survey. Fully 56 percent viewed a local bank as being very important, with an additional 38 percent considering one to be

important to them and only 3 persons, or 6 percent, viewing a bank as being unimportant.

Those most strongly in favor of a local bank also were strongly in favor of community growth and were comparatively favorable to a large-scale oil and gas industry development in the Yakutat area. Their opinions of large-scale wood products development, however, were more mixed.

160. A radio station.

About three-quarters (76 percent) of those interviewed believed that the provision of a local radio station would be of some importance to them, with 32 percent having strongly favorable opinions on this subject. Despite the fact that radio reception in the Yakutat area at present is at best unreliable, 24 percent of the respondents considered a local radio station to be unimportant.

Of those who considered a local radio station very important, slightly more than two-thirds were Indian. This group was generally in favor of community growth and favored large-scale oil and gas industry development in the Yakutat area although it was more mixed in its opinions of large-scale wood products development.

On the other hand, almost two-thirds of those who believed a local radio station to be unimportant were white. This group strongly opposed community growth and large-scale industrial development.

161. A television station.

A television station in Yakutat was generally rated as being of less importance than a local radio station although 40 percent of those interviewed believed one to be very important. Thirty percent considered such a facility important and an equal percentage considered it unimportant.

As with the case of those for and against a local radio station, respondents favoring a television station in Yakutat were mostly Indian and in favor of community growth and large-scale oil and gas development although, again, they were more mixed in their opinions of large-scale wood products development. Also, those rating a television station as unimportant were whites by an almost two to one ratio and were opposed to community growth and large-scale industrial development.

162. A local newspaper.

Of all the community improvements listed in the survey, the addition of a local newspaper was the least important to Yakutat

respondents. While 56 percent of those interviewed believed a local newspaper would be of at least some importance, only 20 percent believed one would be very important and 44 percent considered one to be unimportant. Unlike the other amenities listed, a majority of those who considered a local newspaper to be very important were white. However, this group still tended to favor community growth and large-scale development in the Yakutat area.

163. What type of housing unit do you live in?

All but 7 persons interviewed, or 86 percent, lived in single-family dwelling units. All of the Indians surveyed lived in this type of housing, compared with 70 percent of the whites. Of the whites who lived in multi-family units, most lived outside the city of Yakutat.

164. What is the condition of this housing unit?

Most people surveyed (62 percent) rated the condition of their housing units as good, with an additional 26 percent considering their homes to be in fair condition. These ratings should be viewed more as a measure of people's satisfaction with their homes than an accurate assessment of housing quality. It is significant, however, that more than three-quarters of the whites rated their housing as good whereas only half of the Indians surveyed did so. Furthermore, 5 of the 6 units rated as poor or very poor were occupied by non-whites.

165. How many rooms are in this house?

Sixty-eight percent of the housing units surveyed had 5 or more rooms and none had less than 2 rooms. However, no white-occupied units had less than 4 rooms and all but two had 5 rooms or more. In contrast, only one-half of the Indian-occupied units had 5 or more rooms. Furthermore, all dwelling units with less than 4 rooms were located within the city of Yakutat.

The degree of overcrowding within dwelling units was found to be comparable with that recorded for the Skagway/Yakutat Census Division by the 1970 Census. Using the standard of more than one person per room to indicate overcrowding, 76 percent of the units surveyed in Yakutat were uncrowded compared with 80 percent in the Census Division as a whole in 1970. Nevertheless, of the 12 units surveyed which housed more than one person per room, 11 were located in the city of Yakutat and 10 were occupied by Indian families.

166. Do you reside inside or outside the city of Yakutat?

This was one of the crucial questions asked in the Yakutat survey. Since annexation of areas presently outside its corporate limits is one option open to the city as a means of controlling development

in those areas, it was held to be very important to determine whether or not the views of those living outside town differed substantially from those of city residents.

The racial composition of those living inside and those living outside the city of Yakutat is totally dissimilar. In good measure, this is due to the fact that Yakutat is a native townsite while many of the people outside town are whites living in government provided housing. The city of Yakutat had estimated that its population was approximately 75 percent Indian and that about 85 percent of those living outside town were whites. These estimates were used as controls for sampling purposes.

Of those surveyed, 64 percent lived within the city of Yakutat and 36 percent lived outside town. The racial breakdown was similar to that estimated by the city, with 72 percent of those living in town being Indian, 25 percent being white and 3 percent (or 1 person) belonging to another race group. Of those living outside the city, 83 percent were white and 17 percent were Indian.

Those interviewed who lived outside the city were mainly renters and were relatively less in favor of annexation than those living in town. Furthermore, residents from outside town had much higher household incomes than did city residents. Whereas 83 percent of the households surveyed outside town had an income of at least $15,000 in 1974, only 41 percent of city residents had reached this income level.

On the subject of growth, persons inside and outside the city of Yakutat also tended to differ. While city residents were equally divided on the merits of community growth, this was favored by almost a two to one margin by residents from outside town. City residents also had a much stronger negative reaction to large-scale development in the Yakutat area by both the wood products and oil and gas industries.

167. How many people are there in this household?

Of the 50 households surveyed in the Yakutat area, 6 percent had 1 member; 22 percent had 2 members; 16 percent had 3 members; 18 percent had 4 members; 22 percent had 5 members, 14 percent had 6 members and 2 percent had 7 or more members.

Compared with statistics developed for the Skagway/Yakutat Census Division from the 1970 Census, households surveyed in Yakutat contained a relatively small proportion with 1 or 2 members and also those with 7 or more members. However, Yakutat proved to have about the same proportion of 3 or 4 member households and a higher proportion of households with 5 or 6 persons.

All 3 one-person households were Indian and all were within the city of Yakutat. There was no clear racial division among the other household sizes. However, it is significant that respondents in 7 of the 11 two-member households were between 45 and 64 years of age as it tends to suggest that these may have been families whose children have grown up and moved out.

168. What is your age?

Of those surveyed, 6 percent were between 15 and 24 years of age; 32 percent were between 25 and 34; 28 percent were between 35 and 44; 32 percent were between 45 and 64; and 2 percent were 65 years of age or older. There appears to have been some bias built into the survey on the sex distribution, as females aged between 25 and 34 were over-represented whereas the same situation in reverse occurred with males aged between 45 and 64.

Of those surveyed between the ages of 15 and 34, a majority were renters and most lived in the city. A slight majority wanted Yakutat to grow but, as a group, these people were strongly against large-scale wood products and oil and gas industry development. Somewhat surprisingly, this group was also pessimistic about the future.

Those surveyed who were between the ages of 35 and 64 were mostly homeowners. These people were more optimistic about the future but less committed to growth than those in the younger age groups. However, they tended to be more in favor of large-scale industrial development in the Yakutat area.

169. What is your sex?

It is assumed that the breakdown between the sexes of those surveyed of 52 percent males and 48 percent females was reasonably close to overall community averages. However, since this was a household survey rather than a census, some biases did occur. Thus, male whites and female Indians tend to be proportionately over-represented. In addition, males interviewed were more heavily weighted in the upper age groups while most females interviewed were in the younger age brackets.

With the above limitations in mind, it is nevertheless significant that males tended to be rather more optimistic about the future, were more in favor of community growth and tended to be more in favor of large-scale industrial development in the Yakutat area, particularly oil and gas development. Females, on the other hand, were equally divided on the subject of community growth and were opposed to large-scale industrial development in this area.

170. What is your race?

Fifty-two percent of those surveyed were Indian, 46 percent were white and 2 percent (or 1 person) belonged to another race group. As previously indicated, there was a degree of sex bias in the survey as white males and Indian females were proportionately over-represented. Nevertheless, several significant differences between the two major race groups did present themselves.

In terms of occupation, a slightly larger proportion of whites than Indians were engaged in the professional/technical/managerial and in the clerical and service areas than were Indians. On the other hand, most people engaged in fishing and processing occupations were Indian. These occupational differences were reflected in income distribution patterns, with 18 of the 23 whites surveyed having a household income of $15,000 or more in 1974. Although the incomes of Indian households tended to center in the middle ranges, more than half of those surveyed had annual incomes of less than $15,000 in 1974.

There were no strong differences between the two race groups in their views on annexation or community growth. However, Indians tended to be more opposed to large-scale industrial development, particularly by the oil and gas industry. On the other hand, while Indians tended to believe that life would improve, they were somewhat less optimistic about life in general but were less pessimistic about future race relations.

171. How much education have you received?

Of 6 persons interviewed, or 12 percent, had not progressed beyond a junior high school education. On the other hand, 32 percent of those surveyed had attended at least one year of college, while 54 percent had completed their education at a level between the 10th grade and high school graduation.

All 6 of those who had not advanced beyond the 9th grade were Indian, all were 45 years old or older and all were engaged in fisheries-related occupations. The incomes of these people tended to be in the lower ranges. However, most were homeowners who wanted community growth, were optimistic about the future and who favored large-scale development.

Not unexpectedly, those with 10 to 12 years of schooling tended to have incomes in the middle ranges. They were evenly divided between renters and owners, were pessimistic about life getting better in the future and were divided in their opinions of community growth. However, they were quite strongly opposed to large-scale wood products and oil and gas industry development in the Yakutat area.

Those with 13 or more years of schooling included a large proportion of persons engaged in professional/technical/managerial occupations. The household incomes of this group tended to center in the higher ranges. Furthermore, this group was relatively optimistic about life getting better and wanted growth in the Yakutat area, although it was opposed to large-scale wood products and oil and gas industry development.

172. What is your occupation?

As part of the Yakutat survey, each person interviewed was asked to list his or her occupation. These occupations were then assigned to the 10 major occupational categories which were developed by the U.S. Department of Labor and which are used by both Federal and State agencies.

A reasonably broad range of occupations was represented by those surveyed although, since Yakutat's economy is fairly highly specialized, the largest number was involved in the professional and fisheries-related areas. Twenty-four percent of the respondents were employed in professional/technical/managerial occupations, 18 percent were in farming, fisheries and forestry occupations (all of whom were fishermen) and 10 percent were involved in seafood processing activities.

The other support occupations included 4 percent of those surveyed being in machine trades, 2 percent in structural work and 4 percent in miscellaneous occupations. In Yakutat, those in miscellaneous occupations were both heavy equipment operators.

The retail and service sector of the community accounted for 28 percent of those surveyed, with 18 percent being engaged in service occupations and 10 percent in clerical and sales activities. Finally, 10 percent of those surveyed, all of whom were housewives, had no specified occupation.

Three of these occupational sectors bear some further analysis. Taking the professional/technical/managerial group first, people in these occupations were fairly evenly divided in terms of their age, race and sex characteristics although a relatively large proportion were renters and half lived outside the city. Furthermore, although this group was in favor of annexation, a larger than normal share opposed such an action by the city of Yakutat. Not surprisingly, this group had a relatively high level of educational attainment and half had household incomes of $15,000 or more in 1974. However, while these people were mildly favorable toward community growth, they opposed large-scale wood products and oil and gas industry development, particularly the latter.

The second sector is a combination of the clerical and sales and the service occupations. This sector included more females than males and more whites than Indians. It contained a high proportion of renters, a wide range of household sizes and a degree of opposition to annexation. This was a group which was highly pessimistic about life getting better in the future and which was opposed to community growth and large-scale development in the Yakutat area.

The third sector includes the fisheries-related occupations of farming, fisheries and forestry and processing. These were predominantly Indian occupations. Persons in this group were mostly homeowners and accounted for a large proportion of those from smaller households and the lower income ranges. Nevertheless, this group was highly optimistic about life getting better in the future and it strongly favored community growth and large-scale development in the wood products and oil and gas industries.

APPENDICES

1. HOW TO READ THE DATA

Although the data in the reproduction of the computer print-out contained in the following chapter is in a simple form, often initial investigation by persons unfamiliar with the comparison of relative and even real figures encounters difficulty. Therefore, this chapter on how to read the data is included to assist the reader in evaluating the data presented in tabular form in the reproduction of the computer print-out and the relative figures presented in the chapters interpreting this data.

A total of 172 questions was asked of a sample of 50 persons in 50 different households in the Yakutat area. Each page reproduced from the computer print-out contains in the title the question number and the question at the top of the page.

In the top left hand corner of each page is the compilation of the responses to the particular question in the title presented as absolute figures in tabular form, not percentages. These absolute figures are, of course, whole numbers (of respondents) whereas the relative figures as often expressed in the Interpretation of the Individual Survey Questions and the General Planning Implications for Yakutat are percentages (of these respondents where the base is expressed as 100).

This tabulation shows the response of the sample to the title question and it provides for further analysis of the patterns of relationship among the different kinds of responses. This involves computer cross-tabulations through which responses are distributed to other variables of interest.

In this print-out there are fifteen variables which can basically be classified into demographic variables (sex, race, age, education levels, etc.) and social/economic variables (attitudes towards community growth, large-scale industrial development, life in general, etc.) which are cross-tabulated with the results of the title question.

Therefore, one not only can directly interpret the results of the sample regarding the title question, but also by using the cross-tabulations one can point out the presence and the degree of association between the title variable and each of the variables cross-tabulated.

There are basically two forms of questions, both yielding results with varying degrees of intensity and meaning. There is the closed question (structure question) which forces the respondent to select from various pre-determined responses. (For example, Question 81: "The U.S. Department of the Interior is investigating the possibility of leasing outer continental shelf lands in the Gulf of Alaska for oil and gas exploration and development. Have you heard of this?") Closed questions, by the very nature of the subject, provide the options to the respondent (in the case of Question 81, the respondent either has heard of this which results in a YES response or has not heard of this which results in a NO response or was unsure which results in a DON'T KNOW response). Limited but valuable information can come from these questions.

While many of the 172 questions are closed, there are others which are "open", that is, totally unstructured questions. For example, there is no certainty in being able to predict the response to the following question, (Question 9): "What do you think are the two or three most important problems right here in this community today?"

Since a wide range and variety of responses is possible or has been solicited, these responses must be grouped in categories (coded) as close to the actual responses as possible so that significant detail will not be lost.

The most important factor in the selection of open or closed questions in a survey is the objectives of the interview. Where a simple recording of opinions, attitudes or information is required, a closed question will suffice. Where the objective is to probe deeply with a question to elicit the bases of their choice without fear of limiting alternatives or, in some cases, completely avoiding issues, then an open ended question is used.

However, on matters of important inquiry, both a closed and an open response to a particular question may often be requested. The open response yields the context in which the closed response should be interpreted. For example, Question 1: "Have you always lived in this community?" is closed and is followed by Question 2: (If NO to Question 1), "What community did you come here from?" -- an open question.

Looking at the print-out, one will note that the variables cross-tabulated with the results of the title question are designated by key words or phrases above each contingency table. For example, Question 35: "Do you own this house,

are you in the process of buying it or do you rent it?" The key words representing the response to this question are as follows:

****HOME OWNERSHIP****

OWN BUYING RENT OTHER

Now, looking at each page, one should read the title question printed at the top of the page, then scan the response of the sample to the title question at the top left hand corner of the page. These totals tell how all of the respondents to the title question answered the question in real numbers.

Because of the relatively small number of interviews (50), real numbers were used throughout this print-out. This was done primarily for reference purposes expecially where there are large numbers of entries in the stub and the boxhead of tables after cross-tabulation resulting in a wide distribution of responses in the body of the table. An example of this is the cross-tabulation of occupation with income in Question 91. Of course, it is a simple process converting these real numbers to percentages. Since the base figure is 50 (the total number of persons interviewed), to express the base as 100 and therefore in terms of percentage required nothing more than doubling the existing real numbers.

Take Question 1 for example: "Have you always lived in this community?"

	NUMBER	CONVERTING BASE TO 100 TO EXPRESS IN PERCENTAGE
YES	18	36
NO	32	62
TOTAL NUMBER	50	100

It can also readily be observed that all persons interviewed responded to this question.

In addition, it can be observed that 18 of the 50 persons interviewed, or 36 percent, have always lived in Yakutat; but who are these people? Are they predominantly male or female? What are their opinions on some of the important

issues in Yakutat? And etc. Information about these people and their households and opinions they are willing to express can be related to these 18 people.

As the eye moves over the cross-tabulations, the comparison is continuously made within each table of the numbers on the same line horizontally. For example:

		SEX		**RACE**		
	NO.	MALE	FEMALE	IND.	WHITE	OTHER
YES	18	11.0	7.0	17.0	1.0	0.0
NO						
****TOTAL NUMBER						

The comparison here reveals the composition of the people answering "YES" to the question, "Have you always lived in this community", in terms of their responses to 15 other questions selected to be cross-tabulated. One finds that of the 18 persons interviewed who have always lived in Yakutat, 11 are male and 7 are female. Proceeding further along the same line to the next table entitled race, it can be observed that 17 are Indians while only 1 is a white.

When percentages are used, it is necessary to double the whole number, thus 36 percent responded "YES" to the question, "Have you always lived in this community?" In terms of the composition of this 36 percent by sex, it is composed of 22 percent males and 14 percent females, and by race its composition is 34 percent Indian and 2 percent white.

Of course, it may be more desirable to express percentages in terms of the number responding "YES" to this question. In this case, 18 would become the base (100) and all numbers along this line could be divided by 18 to elicit respective percentages. One therefore finds that 61 percent of those 18 persons responding who have always lived in this community are male and 39 percent are female. Also, 94 percent are Indian and 6 percent are white.

It is also necessary to review the tables resulting from the cross-tabulation of variables on a vertical basis by reading down the columns of numbers. For example, in Question 1 in the extreme lower right hand corner of the print-out, there is a table which distributes those who

responded "YES" and "NO" to the question, "Have you always lived in this community" according to their response to Question 166 on whether they lived inside the corporate boundary of the City of Yakutat or outside.

	**IN CITY/ IN	OUT** OUT
YES	15	3
NO	17	15
***TOTAL NUMBER	32	18

In this example, a greater insight into the composition of the City of Yakutat and the outside area can be gained. It can be seen that 15 of the 32 respondents randomly sampled in the City of Yakutat had always lived there. This can also be stated as 47 percent (15 ÷ 32) of the respondents within the City of Yakutat have always lived there. On the other hand, only 3 of the 18 persons surveyed, or 17 percent, who reside outside the City of Yakutat have always lived there.

There are also other instances where it may be necessary or desirable to use a difference base in interpreting the data. For example, in Question 97, "If you own your own house, about how much do you spend each year on maintenance to your house?" the response was as follows:

NONE	23
1 - 200	6
201 - 400	4
401 - 600	1
OVER 600	6
NO ANSWER	10
**TOTAL NUMBER	50

NONE represents 21 renters and 2 others (rent free) that can be verified by the responses to Question 35. Also, the NO ANSWER represents in most cases a reluctance to hazard an estimate of yearly housing maintenance expenses.

Therefore, the responses with significance in terms of the dollar amounts desired in the response to the question are the remaining 17 respondents who provided these answers. Thus, these 17 respondents become the base for such statements of interpretation as follows: Approximately 35 percent of those responding to the question regarding homeowner maintenance expenses estimated that they made expenditures of $200 or less each year, while 35 percent claimed this yearly expense was above $600.

2. YAKUTAT QUESTIONNAIRE AND CODED RESPONSES

01. Have you always lived in this community?

18 Yes
32 No

02. If No, what community did you come here from?

5 Juneau
6 Other Southeast community
11 Remainder Alaska
10 Outside Alaska
0 No response
18 Not applicable

03. Also if No, what was your main reason for leaving that community?

15 Employment
10 Desire to live in Yakutat
6 Other
1 No answer
18 Not applicable

04. Also if No, what was your main reason for moving to this community?

13 Employment
9 Small community living
6 Hometown
2 Other
2 No answer
18 Not applicable

05. What is the best reason you know of for staying in this community?

18 Hometown
20 Small community living
9 Employment
1 Other
2 No answer

06. What would be the best reason for leaving this community that you know of?

17 Employment
6 Community growth/development
8 No reason to leave
4 Weather
3 Education
9 Other
3 No answer

07. What do you think are the two or three most important problems right
08. here in this community today?
09.

15 Unemployment
11 Drinking
8 Housing
12 No social activities
7 Lack of buyable land
5 Race relations
24 Community facilities/services
7 Transportation services
11 Other
50 No answer

10. Now, what are the two or three really good things about this
11. community?

19 Natural setting
37 Small town feeling
24 Hunting and fishing
6 Community facilities
5 Other
9 No answer

12. If you heard that most of the people who live in this community were moving to another town, what town do you think they would be moving to?

23 Anchorage
3 Local undeveloped area
6 Other Southeast community
6 Remainder Alaska
2 Outside Alaska
10 Don't know

13. How long do you and your family intend to remain in this community?

1 Less than 1 year
5 1 - 5 years
37 Indefinitely or permanently
7 Don't know

14. Do you consider Yakutat to be a small community, a medium sized community or a large community?

40 Small
8 Medium
2 Large
0 No opinion

15. Would you like to see the community of Yakutat grow, remain the same or decrease in population?

25 Grow
20 Remain the same
1 Decrease
4 No opinion

16. How many people would you like to see in this community?

3 Under 500
17 500 - 599
5 600 - 999
7 1,000 - 1,499
3 1,500 - 1,999
4 2,000 - 4,999
4 5,000 and over
7 Don't know

17. Culture basically consists of the ideas, customs, skills, arts, etc.
18. of a given people in a given period of time. What is important in
19. the Yakutat culture to you? Can you name three or four things?

23 Language
33 Arts and crafts
18 Dancing
11 Subsistence
4 History
12 General lifestyle/customs
3 Other
46 Don't know

20. The culture of Yakutat is complex. Historically, the dominant culture has been Tlingit. This has been influenced in recent times by the white culture of the western world. The product of these two cultures is a culture that is a part of everyone in the Yakutat area. Do you fear the loss of this culture?

34 Yes
13 No
3 Don't know

21. If the Tlingits in Yakutat become a small ethnic minority, do you think this would be a good thing or a bad thing, or wouldn't it make any difference?

1 Good
21 Bad
20 No difference
8 No opinion

22. If Good, why?

1 List
49 Not applicable

23. If Bad, why?

9 Loss of identity/culture
7 Loss of voice
2 Other
3 Don't know
29 Not applicable

Do you believe the following combinations of industries to be reasonably compatible or incompatible?

24. Commercial fishing and the tourism and recreation industry.

34 Compatible
10 Incompatible
6 Don't know

25. Commercial fishing and the timber industry.

32 Compatible

10 Don't know

34. How long have you lived in this house?

16 Less than 1 year
16 1 - 2 years
7 3 - 5 years
11 More than 5 years

35. Do you own this house, are you in the process of buying it, or do you rent it?

14 Own
13 Buying
21 Renting
2 Other

36. Are you satisfied with this house as a place for you and your family to live?

26 Yes
22 No
2 No opinion

37. If Yes, what do you most like about this house?

5 Convenient location
6 Heating/utilities
3 Scenic view
5 Ownership
7 Other
24 Not applicable

38. If No, what do you most dislike about this house?

10 Inadequate space
5 Poor condition
3 Inadequate utilities
4 Other
28 Not applicable

39. Are you, or anyone who lives in this house, related to the people who live in any of the four closest houses?

28 No
12 Yes, related to people in 1 house
2 Yes, related to people in 2 houses
3 Yes, related to people in 3 houses
5 Yes, related to people in 4 houses

40. How many feet away is the closest house to your house?

11 Under 20 feet
12 20 - 50 feet
13 51 - 100 feet
13 Over 100 feet
1 Don't know

41. Do you feel more comfortable having your house located close to your neighbors' houses or do you prefer you house to be located further away from them?

6 Close
28 Further away
14 No difference
2 No opinion

42. If close, why?

3 Security
3 Other
44 Not applicable

43. If close, how close?

6 List
44 Not applicable

44. If further away, why?

19 Privacy
5 More yard space
4 Other
22 Not applicable

45. If further away, how far?

6 100 feet or less
2 101 - 200 feet
15 Over 200 feet
5 No answer
22 Not applicable

46. It is less expensive to build housing with sewer, water and electric hookups where houses are placed reasonably close together. If you had a choice between a house with more interior space located closer to other houses (say 15 to 20 feet apart) or a house with less interior space located further away (say 50 feet or more between houses), which would you choose?

12 More interior space located closer together
27 Less interior space located further away
11 No opinion

47. What job skills do you have? List two or three if possible.
48.
49. 13 Professional/technical/managerial
22 Clerical and sales
28 Services
6 Farming, fishery, forestry, etc.
3 Processing
8 Machine trades
0 Bench work
14 Structural work
6 Miscellaneous
50 Not specified

50. Have you taken any training courses designed to lead to employment during the past five years?

14 Yes
36 No

51. If Yes, what training course(s) did you take?

14 List
36 Not applicable

52. Do you think that training courses are worthwhile?

50 Yes
0 No
0 Don't know

53. If No, why not?

50 Not applicable

54. Would you be interested in taking a training course outside of Yakutat if a good job awaited you upon your return?

38 Yes
11 No
1 Don't know

55. Do you think that on-the-job training is worthwhile?

50 Yes
0 No

56. Would you be interested in on-the-job training if a job you desired was offered to you?

45 Yes
5 No
0 Don't know

57. Do you belong to a union?

8 Yes
42 No

58. If Yes, which union?

9 List
41 Not applicable

59. Have you attempted to work in the wood products industry (logging) in the Yakutat area?

8 Yes
42 No

60. If Yes, have you gotten work in that industry?

 8 Yes
 0 No
42 Not applicable

61. If No to 60, why not?

50 Not applicable

62. Will you attempt to get work with the oil and gas industry if development takes place in this area?

20 Yes
24 No
 6 Don't know

63. If Yes, do you think you will be successful?

14 Yes
 3 No
 3 Don't know
30 Not applicable

64. If Yes, to 63, why?

 5 Feel qualified for specific job
 9 Feel generally qualified
36 Not applicable

65. If No to 63, why?

 3 Too old
47 Not applicable

Let me ask you some sensitive questions about race. As you know, it is easier to live and work around some people more than others. This goes for white people, Indian people and others. Not speaking for yourself but for people in general in this community, do you feel there is a lot of difficulty, a little difficulty, or no difficulty at all living and working around:

66. (Asked of Indians only) White people generally?

 1 Lot of difficulty
10 Little difficulty
11 No difficulty
 4 No opinion or refused
24 Not applicable

67. (Asked of Indians only) White people who have lived in the Yakutat area a long time?

1 Lot of difficulty
7 Little difficulty
14 No difficulty
4 No opinion or refused
24 Not applicable

68. (Asked of Indians only) White people who have just recently resided in the Yakutat area?

6 Lot of difficulty
7 Little difficulty
7 No difficulty
6 No opinion or refused
24 Not applicable

69. (Asked of whites only) Indian people generally?

1 Lot of difficulty
9 Little difficulty
11 No difficulty
2 No opinion or refused
27 Not applicable

70. (Asked of whites only) Indian people who have lived in the Yakutat area a long time?

1 Lot of difficulty
9 Little difficulty
12 No difficulty
1 No opinion or refused
27 Not applicable

71. (Asked of whites only) Indian people who have just recently resided in the Yakutat area?

2 Lot of difficulty
7 Little difficulty
8 No difficulty
6 No opinion or refused
27 Not applicable

72. Do you think that the relationships between the Indians and the whites will get better or worse if there is rapid growth in the Yakutat area, or doesn't it make any difference?

4 Better
21 Worse
14 No difference
11 No opinion

73. Have you left the Yakutat area to attend school or training classes?

21 Yes
29 No

74. If Yes, how many years did you spend away from the Yakutat area?

6 Less than 1 year
4 1 - 3 years
7 4 - 6 years
4 More than 6 years
29 Not applicable

75. The oil and gas industry is constantly in the news with the recent petroleum shortages, the resulting cost increases of petroleum products and accelerated exploration and development programs, so we all have some impressions of this industry. Do you have favorable unfavorable or mixed impressions of the oil/gas industry?

6 Favorable
12 Unfavorable
27 Mixed
5 No opinion

76. Would your opinion of a reasonably large oil and gas industry operation in the Yakutat area be favorable, unfavorable or mixed?

12 Favorable
18 Unfavorable
18 Mixed
2 No opinion

77. Other than the local petroleum dealers, have you had any contact with people from the oil and gas industry?

23 Yes
27 No

78. The Yakutat area has experienced logging and although it has been on a limited scale, most people have had the opportunity to observe this industry. Do you have favorable, unfavorable, or mixed impressions of the logging industry?

13 Favorable
18 Unfavorable
13 Mixed
6 No opinion

79. Would your opinion of a reasonably large-scale forest products industry operation in the Yakutat area be favorable, unfavorable or mixed?

13 Favorable
23 Unfavorable
12 Mixed
2 No opinion

80. Have you had any contacts with the logging or forest products industry?

32 Yes
18 No

81. The U.S. Department of the Interior is investigating the possibility of leasing outer continental shelf lands in the Gulf of Alaska for oil and gas exploration and development. Have you heard this?

40 Yes
7 No
3 Don't know

82. If Yes, what have you heard?

0	$2,000 - $2,999
4	$3,000 - $4,999
2	$5,000 - $7,499
8	$7,500 - $9,999
8	$10,000 - $14,999
12	$15,000 - $19,999
10	$20,000 - $24,999
2	$25,000 - $29,999
3	$30,000 or over
0	Refused

92. About how much money did all members of this household get from the Alaska Native Claims Settlement fund in 1974?

1	None
2	$1 - $100
4	$101 - $250
8	$251 - $500
3	$501 - $750
4	$751 - $900
3	$901 - $1,150
1	$1,151 - $1,500
2	Over $1,500
2	No answer
20	Not applicable

93. About how much do you spend each month on fuel for cooking and heating this house?

6	Included in rent
1	$1 - $25
10	$26 - $50
3	$51 - $75
11	$76 - $100
3	$101 - $125
3	$126 - $150
2	$151 - $175
1	$176 - $200
4	Over $200
6	No answer

94. About how much do you spend each month on electricity?

6	Included in rent
6	$1 - $25
17	$26 - $50
4	$51 - $75
4	$76 - $100
0	$101 - $125
1	$126 - $150
4	Over $150
8	No answer

95. About how much do you spend each month for other utilities such as sewer and water services and garbage and trash collection?

4	Included in rent
8	Zero
3	Under $10
16	$11 - $20
3	$21 - $30
13	No answer

96. City Residents Only, if you own your own house, about how much do you spend each year on property taxes?

12	None (don't own house)
8	$0 - $100
1	$101 - $200
3	Over $200
8	No answer/don't know
18	Not applicable

97. If you own your own house, about how much do you spend each year on maintenance to your house?

23	None (don't own house)
6	$1 - $200
4	$201 - $400
1	$401 - $600
6	Over $600
10	No answer

98. About how much money does your household need to live on in an avera year?

3	$5,000 or less
5	$5,001 - $6,999
7	$7,000 - $9,999
8	$10,000 - $12,999
9	$13,000 - $15,000
5	Over $15,000
13	No answer

99. Do you have a savings account at a bank?

35 Yes
13 No
2 No response

3 No response

102. Do you have a life insurance policy?

25 Yes
22 No
3 No response

103. If you had savings to invest, where would you invest this money?

16 Land
4 Local business
10 Other industries
20 No answer

104. Do you own a radio?

42 Yes
5 No
3 No answer

105. If Yes, about how many hours do you have the radio on each day?

12 Seldom listen
12 1 - 3 hours
9 4 - 6 hours
6 More than 6 hours
3 No answer
8 Not applicable

106. When was the last time you or a member of this household saw a movie?

23 Within the last 3 days
10 Within the last week
10 Within the last month
3 Beyond the last month
4 No answer

107. How many times a month do you and other members of this household see a movie?

 7 Zero
20 1 - 5 times
10 6 - 10 times
 4 11 - 15 times
 4 More than 15 times
 5 No answer

108. When was the last time someone in this household read a newspaper or a magazine?

21 Today
22 1 - 3 days ago
 2 Within the last week
 1 Don't read
 4 No answer

QUESTION 20. THE CULTURE OF YAKUTAT IS COMPLEX. HISTORICALLY, THE DOMINANT CULTURE HAS BEEN TLINGIT. THIS HAS BEEN INFLUENCED IN RECENT TIMES BY THE WHITE CULTURE OF THE WESTERN WORLD. THE PRODUCT OF THESE TWO CULTURES IS A CULTURE THAT IS A PART OF EVERYONE IN THE YAKUTAT AREA. DO YOU FEAR THE LOSS OF THIS CULTURE?

IESTION 46. IT IS LESS EXPENSIVE TO BUILD HOUSING WITH SEWER, WATER AND ELECTRIC HOOK-UPS WHERE HOUSES ARE PLACED REASONABLY CLOSE TOGETHER. IF YOU HAD A CHOISE BETWEEN A HOUSE WITH MORE INTERIOR SPACE LOCATED CLOSER TO OTHER HOUSES (SAY 15 TO 20 FEET APART) OR A HOUSE WITH LESS INTERIOR SPACE LOCATED FURTHER AWAY (SAY 50 FEET OR MORE BETWEEN HOUSES), WHICH WOULD YOU CHOOSE?

UESTION 66.

LET ME ASK YOU SOME SENSITIVE QUESTIONS ABOUT RACE. AS YOU KNOW, IT IS EASIER TO LIVE AND WORK AROUND SOME PEOPLE MORE THAN OTHERS. THIS GOES FOR WHITE PEOPLE, INDIAN PEOPLE AND OTHERS. NOT SPEAKING FOR YOURSELF BUT FOR PEOPLE IN GENERAL IN THIS COMMUNITY, DO YOU FEEL THERE IS A LOT OF DIFFICULTY, A LITTLE DIFFICULTY, OR NO DIFFICULTY AT ALL LIVING AND WORKING AROUND:-

ASKED OF INDIANS ONLY, WHITE PEOPLE GENERALLY?

	NO	* SEX *		** RACE **			***** AGE *****					FAVOR ANNEXATION
