This edition was funded by a grant from the Office of Coastal Zone Management, U. S. Department of Commerce.

September 1978

PREFACE

The Bibliography of the Territory of Guam is an update and expansion of the GUAM COASTAL PLANNING BIBLIOGRAPHY done by the Guam Coastal Management Program in September, 1976. So many materials were discovered that were unintentionally omitted from the original that it was decided to do an entirely new edition rather than a simple appendix. All of the materials in the 1976 edition are incorporated into the 1978 edition, making it as complete as possible. The aim of the bibliography remains the same, to locate and categorize all available written materials concerning Guam which could be used as reference materials by planners and other people doing research about the island.

Unpublished and published documents are included, as well as magazine and journal articles and documents prepared by or for the military and federal agencies. All entries are related to Guam, although reports which focus on the Northern Marianas and Micronesia are included if they contain observations relevant to Guam.

Users of the previous bibliography will notice a few changes in format. The most important features were retained, that is, the organization of all entries by subject rather than by author, and the notation of the library or agency where each document was actually located by the compilers. Titles of the subject categories were changed slightly and a new cross-reference system was devised as aids in locating entries. The purpose of the cross-reference is to identify subject categories which overlap each other in a way that may not be immediately apparent. No attempt was made to cross-reference individual entries.

INTRODUCTION

Organization

There are 20 subject areas which are subdivided into subject categories and subcategories. Almost all documents could be located in more than one place according to its subject matter, making its placement somewhat arbitrary since each document appears as an entry only one time. Subject categories are often cross-referenced by the words "see also:" followed by the reference number, subject area, category, and subcategory where additional entries on similar topics are located. This is to serve as a general guide and by no means exhausts all possibilities.

How to Read an Entry

Each entry is composed of the following: the author, the title, the date of publication, occasionally some notes, and the library location.

Author: The author's last name is listed first. If the entry begins with "Guam" or "US", the document was produced by a Government of Guam or federal agency. If a solid line appears where the authors name would be, the author is the same as the previous author. If no author is shown and there is no solid line where the name would go, the author is unknown.

Title: The title is underlined.

Date of Publication: The designation "n.d." is used when the document was not dated. Following "n.d." a date may appear in parenthesis indicating a date approximated by the compiler.

Occasional Notes: Some entries contain explanatory notes such as the topics covered in a report, number of pages and so forth. For magazine and journal entries, the name of the magazine or journal is followed by the volume, number, and page number, (i.e. Guam Recorder 1(2):59-60).

Library Location: The library location is an abbreviation of the library or agency where the book can be located. A key to the abbreviation appears on page 5.

LIBRARY LOCATION KEY
